

Time Domain Interest Group

John Swinbank / swinbank@princeton.edu

There was no TDIG session at this InterOp.

However...

Science Priorities

- Really constructive session in CSP, in particular focusing on the need for a comprehensive time series data model.
 - Plus a note by Enrique Solano laying out the state of the art (and its deficiencies).
- Constructive discussion on future time domain efforts in the VO.
- Major projects — Gaia, LSST — talking about issuing VOEvents.
 - Gaia will do so as soon as this summer.

Coming up...

- VOEvent Transport Protocol
- VOEvent Registry Extensions
- Build on the time series discussion
- (Continue to) engage with major projects
 - Demonstrate that we mean it when we say “priority area”!
