IVOA interoperability meeting
Urbana, May 21-25, 2012

Introduction

VOSA (VO Sed Analyzer)

- a web tool: <http://svo.cab.inta-csic.es/theory/vosa/>
- designed to automatically determine physical parameters from comparison of observed photometry with collections of theoretical models.
- for several objects at the same time. (~ 1000 objects)
- More than 300 users analysing data.
- More than 6000 data files analysed.
- Using VO tools and services.

Workflow

1

Build object SEDs.

- Object properties: name resolution, distance, extinction.
- User photometry tables + VO catalogs.

2

Analyze object SEDs.

- Fit observed data with theoretical spectra models and/or templates from the VO and estimate physical properties for the objects. (Chi-square test + Bayes analysis)
- Generate a Hertzsprung-Russel diagram using the estimated parameters, obtaining isochrones and evolutionary tracks from the VO (only stars).

3

Save results as VOTable, ASCII, png, eps...

MINISTERIO DE CIENCIA E INVESTIGACIONES

INTA

VOSA

VOSA allows to analyze both stellar and galactic data but, given that the physics involved is not the same, there are some important differences between both cases.

Please, select first what type of objects you want to work with in this session.

Stars and brown dwarfs

Galaxies

Acknowledging VOSA in publications:

Please include the following in any published material that makes use of VOSA:

This publication makes use of VOSA, developed under the Spanish Virtual Observatory project supported from the Spanish MICINN through grant AyA2008-02156.

Referencing VOSA in publications:

If your research benefits from the use of VOSA, we would appreciate if you could include the following reference in your publication:

Bayo, A., Rodrigo, C., Barrado y Navascués, D., Solano, E., Gutiérrez, R., Morales-Calderón, M., Allard, F. 2008, A&A 492,277B.

News: SED building

- More filters.
 - Filter properties from the SVO Filter Profile Service.
 - ~ 1800 filters available.
 - Better correspondence with the Photometry Data Model.
- More options.
 - *nofit*: including points in the SED that won't be used for the analysis.
 - *Av range*: specifying an extinction range so that extinction becomes a fit parameter.
- More VO photometry catalogues.

New: SED: more filters

Filter Profile Service

Filter Plots

The figure displays three transmission curves for 2MASS filters: 2MASS/2MASS.J (red), 2MASS/2MASS.H (blue), and 2MASS/2MASS.Ks (green). The x-axis represents Wavelength (nm) from 12000 to 22000, and the y-axis represents Transmission from 0 to 1. The 2MASS.J curve shows a complex pattern with multiple peaks and troughs between 12000 and 14000 nm. The 2MASS.H curve has a broad peak around 16000 nm. The 2MASS.Ks curve shows a sharp rise starting around 19000 nm.

Filter Profile Service

An experiment about filter standardization in the VO

Funded by  

VO Service Browse Search AuthId: Passw:

Most of the filters from the [SVO Filter Profile Service](#) are available to be used in VOSA using the FilterID as name.

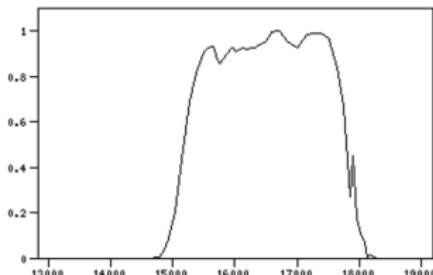

Some of them are not in the list below, in some cases to make the list more easy to browse (because they seem to be less popular filters) and in other cases because not all the synthetic photometry is ready yet. In any case, you can try to use them too.

If you want to upload your own photometry into VOSA as magnitudes, make sure that VOSA will transform those magnitudes to fluxes as you expect (click on the filter name in this list to see the details of the transformation for that case). If not, please, transform your photometry to fluxes before uploading it.

You can click on the table headers to sort the list by that field

| Filter ID | λ_{eff} | Weff | At/Av | ZP (Jy) | Mag.Sys. | ZP Type | Description |
|---------------|------------------------|---------|-------|---------|----------|---------|-------------|
| 2MASS/2MASS.H | 16620.00 | 2509.40 | 0.19 | 1024.00 | Vega | Pogson | 2MASS H |

2MASS/2MASS.H

[2MASS/2MASS.H](#)

a.k.a. **2MASS_H** (you can still use the old vosa name for this filter in your input files)

VOSA will assume that, if you include in your input file magnitudes corresponding to this filter, these magnitudes must be transformed to fluxes using the following relation:

$$F = F_0 * 10^{-\text{mag}/2.5}$$

where

$$* F_0 = 1024.00 \text{ Jy} (1.13e-10 \text{ erg/cm}^2/\text{s}/\text{A})$$

If this is not right for your case, please, transform your magnitudes to fluxes before uploading them to VOSA

Model Fit **Template fit**

Model fit+

This option allows you to estimate some physical properties (such as effective temperature, surface gravity and luminosity) for each object comparing its SED with those derived from theoretical spectra obtained from VO services.

Take a look to the corresponding [Help Section](#) and [Credits Page](#) for more information.

First select the models that you want to use for the fit

[Mark All](#) [Unmark All](#)
[Next: Select model params](#)

Kurucz
Kurucz ATLAS9 ODFNEW /NOVER models. Newly computed ODFs with better opacities and better abundances have been used.

BT-COND
The BT-COND Model grid of theoretical spectra.

BT-NextGen (AGSS2009)
The NextGen Model grid of theoretical spectra; Gas phase only, valid for Teff > 2700 K. Updated opacities.

Black Body flux
Black Body flux as calculated in the BT-NextGen model.

GRAMS, O-rich
GRAMS (Grid of Red supergiant and Asymptotic giant ModelS) is a grid of radiative transfer (RT) models for dust shells around red supergiant (RSG) and asymptotic giant branch (AGB) stars. This is the model grid for Oxygen-rich stars

Husfeld
Husfeld et al models for non-LTE Helium-rich stars

BT-DUSTY
The BT-DUSTY Model grid of theoretical spectra.

BT-NextGen (GNS93)
The NextGen Model grid of theoretical spectra; Gas phase only, valid for Teff > 2700 K. Updated opacities.

GRAMS, C-rich
GRAMS (Grid of Red supergiant and Asymptotic giant ModelS) is a grid of radiative transfer (RT) models for dust shells around red supergiant (RSG) and asymptotic giant branch (AGB) stars. This is the model grid for Carbon-rich stars

TLUSTY OSTAR2002+BSTAR2006
TLUSTY OSTAR2002+BSTAR2006 Grid. The merged files use the BSTAR2006 models for effective temperatures up to 30,000 K and the OSTAR2002 models for higher temperatures.

News: Analysis: New theoretical models

News: Analysis: Observational templates

Comparision of the observed SED with observational templates is useful to estimate the object spectral type.

- Four collections of observational templates.
- Chi-2 fitting, similar to the one for theoretical models.
- Bayesian analysis, similar to the one for theoretical models.

Template fit

This option allows you to estimate the spectral type for each object comparing its SED with those in template collections obtained from VO services.

Take a look to the corresponding [Help Section](#) and [Credits Page](#) for more information.

First select the template collections that you want to use for the fit

[Mark All](#) [Unmark All](#)

[Next: Make the fit](#)

L and T dwarf data archive
L and T dwarf data from Chiu et al. 2006, Golimowski et al. 2004 and Knapp et al. 2004

Keck LRIS spectra of late-M, L and T dwarfs
These spectra were obtained between 1997 and 1999; they are all flux calibrated and generally span the wavelength range 6000-10,000 Å. Spectral types are on the Kirkpatrick et al system as defined in Kirkpatrick et al ApJS, 77, 417 (1991 - for M dwarfs) and Kirkpatrick et al ApJ 519, 802 (1999 - L dwarfs). While not all of these stars are primary spectral standards, they are all bright and should provide an adequate reference sequence. Photometric properties can be derived from the appended postscript files.

The NIRSPEC Brown Dwarf Spectroscopic Survey
The Brown Dwarf Spectroscopic Survey (BDSS), established in 1998 by Dr. Ian McLean in collaboration with Dr. J. Davy Kirkpatrick at IPAC, is designed to study near-infrared moderate-to-high resolution spectra for a large sample of low-mass stars and sub-stellar mass objects in the M and newly defined L and T dwarf classes.

The SpeX Prism Spectral Libraries
The SpeX Prism Spectral Libraries

Options for this fit

Include model spectrum in fit plots? (The fit process will be slower, because getting the spectra from the VO can take some time)

News: Analysis: Observational templates

News: more information.

- **Log** of all the work done.

- VO services consulted, fit made, fit undone, models used, etc since the file was uploaded.
- Web visualization and downloadable file.

- **References**

- Description of all the references for external services, models, etc used to obtain the results for a user file.
- Bibtex file with the bibtex entries for those references.
- Always included in downloads.

Activity Log

Here you can see a log with a summary of all the activity already performed with this file.

Last operations are shown first

2012/05/18 22:22:10 Previous model fit+ results are not valid anymore. They have been deleted

2012/05/18 22:21:43 Model fit+ executed

Parameter values used for the fit:
Kurucz
teff_min = 3500
teff_max = 50000
logg_min = 0.00
logg_max = 5.00
meta_min = -2.50
meta_max = 0.50
BT-NextGen (GN593)
teff_min = 800
teff_max = 9800
logg_min = -5.5
logg_max = 0.5
meta_min = -1.5
meta_max = 0.3

2012/05/18 22:14:00 New photometry found in VO services.

SED changed
ChaHa1: 2MASS, DENIS, WISE
ChaHa10: DENIS

refs.dat ✘
If your research benefits from the use of VOSA, we would appreciate if you could include the corresponding reference in your publication. Note also that VOSA makes use of models, VO services, etc that should be referenced too if they are relevant to your final results. Here you have a list of all the services that have been used for obtaining the results for this particular file. Please, take that into account. The refs.bibtext.bib file includes all the bibtex entries corresponding to the information below

VOSA
-----
* VOSA
- Acknowledgement : This publication makes use of VOSA, developed under the Spanish Virtual Observatory project supported from the Spanish MICINN through grant AyA2008-02156.
- 2008A&A...492..277B : Bayo et al 2008, A&A, 492, 277B

Derreddening
-----
* For derreddening the SEDs we make use of the extinction law by Fitzpatrick (1999) improved by Indebetouw et al (2005) in the infrared.
- 1999PASP..111..63F : Fitzpatrick, E.; 1999, PASP, 111, 63
- 2005ApJ...619..931I : Indebetouw et al, 2005, ApJ 619, 931

VO photometry
-----
* 2MASS All-Sky Point Source Catalog
- Acknowledgement : This publication makes use of data products from the Two Micron All Sky Survey, which is a joint project of the University of Massachusetts and the Infrared Processing and Analysis Center/California Institute of Technology, funded by the National Aeronautics and Space Administration and the National Science Foundation.
- 2000A&AS..143..230 : Ochsenbein et al 2000, A&AS 143, 221

* DENIS Catalogue
- 2000A&AS..143..230 : Ochsenbein et al 2000, A&AS 143, 221
```

Galaxies (Change) No file selected (Select/upload a file)

Upload your own data file (max size=500KB)
It must comply with the [required data format](#)
(A small utility is available to help you to convert an original file in [ascii](#) (csv) or [votable](#) to VOSA input format)

File to upload: [Browse...](#)
Description:
File type: Fluxes (erg/cm²/s/A)
 Fluxes (Jy)
 Magnitudes
[Upload](#)

Create a single object data file
Just write the coordinates (in decimal degrees) of one object that you want to study and we will create a single object data file with the adequate format.
RA and DEC are compulsory.

RA: (deg)
DEC: (deg)

Try it

All this is implemented in new **beta** version:

- <http://svo2.cab.inta-csic.es/theory/vosa/>
- Still testing it
- Feel free to try it

THANK YOU!
