

# Simulated Observations Synergy btw TBL Legacy – POLLUX

**A. Palacios, P. Maeght, M. Sanguillon, A. Emeras,  
A. Lèbre,**

**Observatoire Virtuel – Grand Sud Ouest (OV – GSO)**

# A usecase for stellar spectra within the Virtual Observatory

**Goal** *Derive a first estimate of the rotation velocity of a star*

**Back at the Interop' meeting in Naples in 2011**

**Tools :**

- database of observed stellar spectra **TBL Legacy**
- database of stellar synthetic spectra **POLLUX**
- database of stellar parameters from the literature **PASTEL/ Simbad**
- service for visualization of stellar spectra **VOSpec**

**POLLUX** and **TBL Legacy** teams :

Michèle Sanguillon, Patrick Maeght, Ana Palacios, *Agnès Lèbre, Frédéric Paletou*

## *Telescope Bernard Lyot* *Narval archive*

*Science Ready* Archive collecting spectropolarimetric data from the NARVAL instrument @ TBL /Pic du Midi

High resolution spectra in the spectral domain [375 nm; 1050 nm] that may be normalized to the continuum.

Data include spectral information and polarization information (Stokes parameters).

## *Pollux Database for High Resolution Synthetic Stellar Spectra and SEDs*

Database of very high resolution ( $R = 120\,000$ ) synthetic spectra in the optical domain [300 nm; 1200 nm].

Spectra exist for many spectral types (deficit for hot stars, currently being

Data include the absolute flux and the flux normalized to the continuum.

SEDs between 5 nm and 20 000 nm (exact domain depending on the stellar spectral type)

**Databases both registered in the VO as SSAP services**

**Bases part of the same datacenter : OV – GSO (Toulouse, France)**

# The objectives of VOSPECFLOW

Synthetic spectra in theoretical (POLLUX)

Convolution tool

(macroturbulence, rotation, instrumental profile)

**Simulated observation**, directly comparable with **observed spectra** in telescope archives (TBLegacy)

**Main issue :**

Observed and synthetic spectra are stored in files with different structures

The databases and archives to access them do not answer to the same queries

# The specifications of VOSPECFLOW

Starting from the name of a star :

- Perform automated queries to SIMBAD, VizieR, TBLegacy and POLLUX using the OV protocols
- Provide a convolution module (for convolution over a restricted spectral domain of 100 to 500 Å centered on a chosen spectral feature)
- Provide a graphical interface to check the data retrieved and computed
- Export the data to visualization tools of the VO (Vospec)

VOSPECFLOW is designed to perform a rough analysis or to check the nature of a target star.

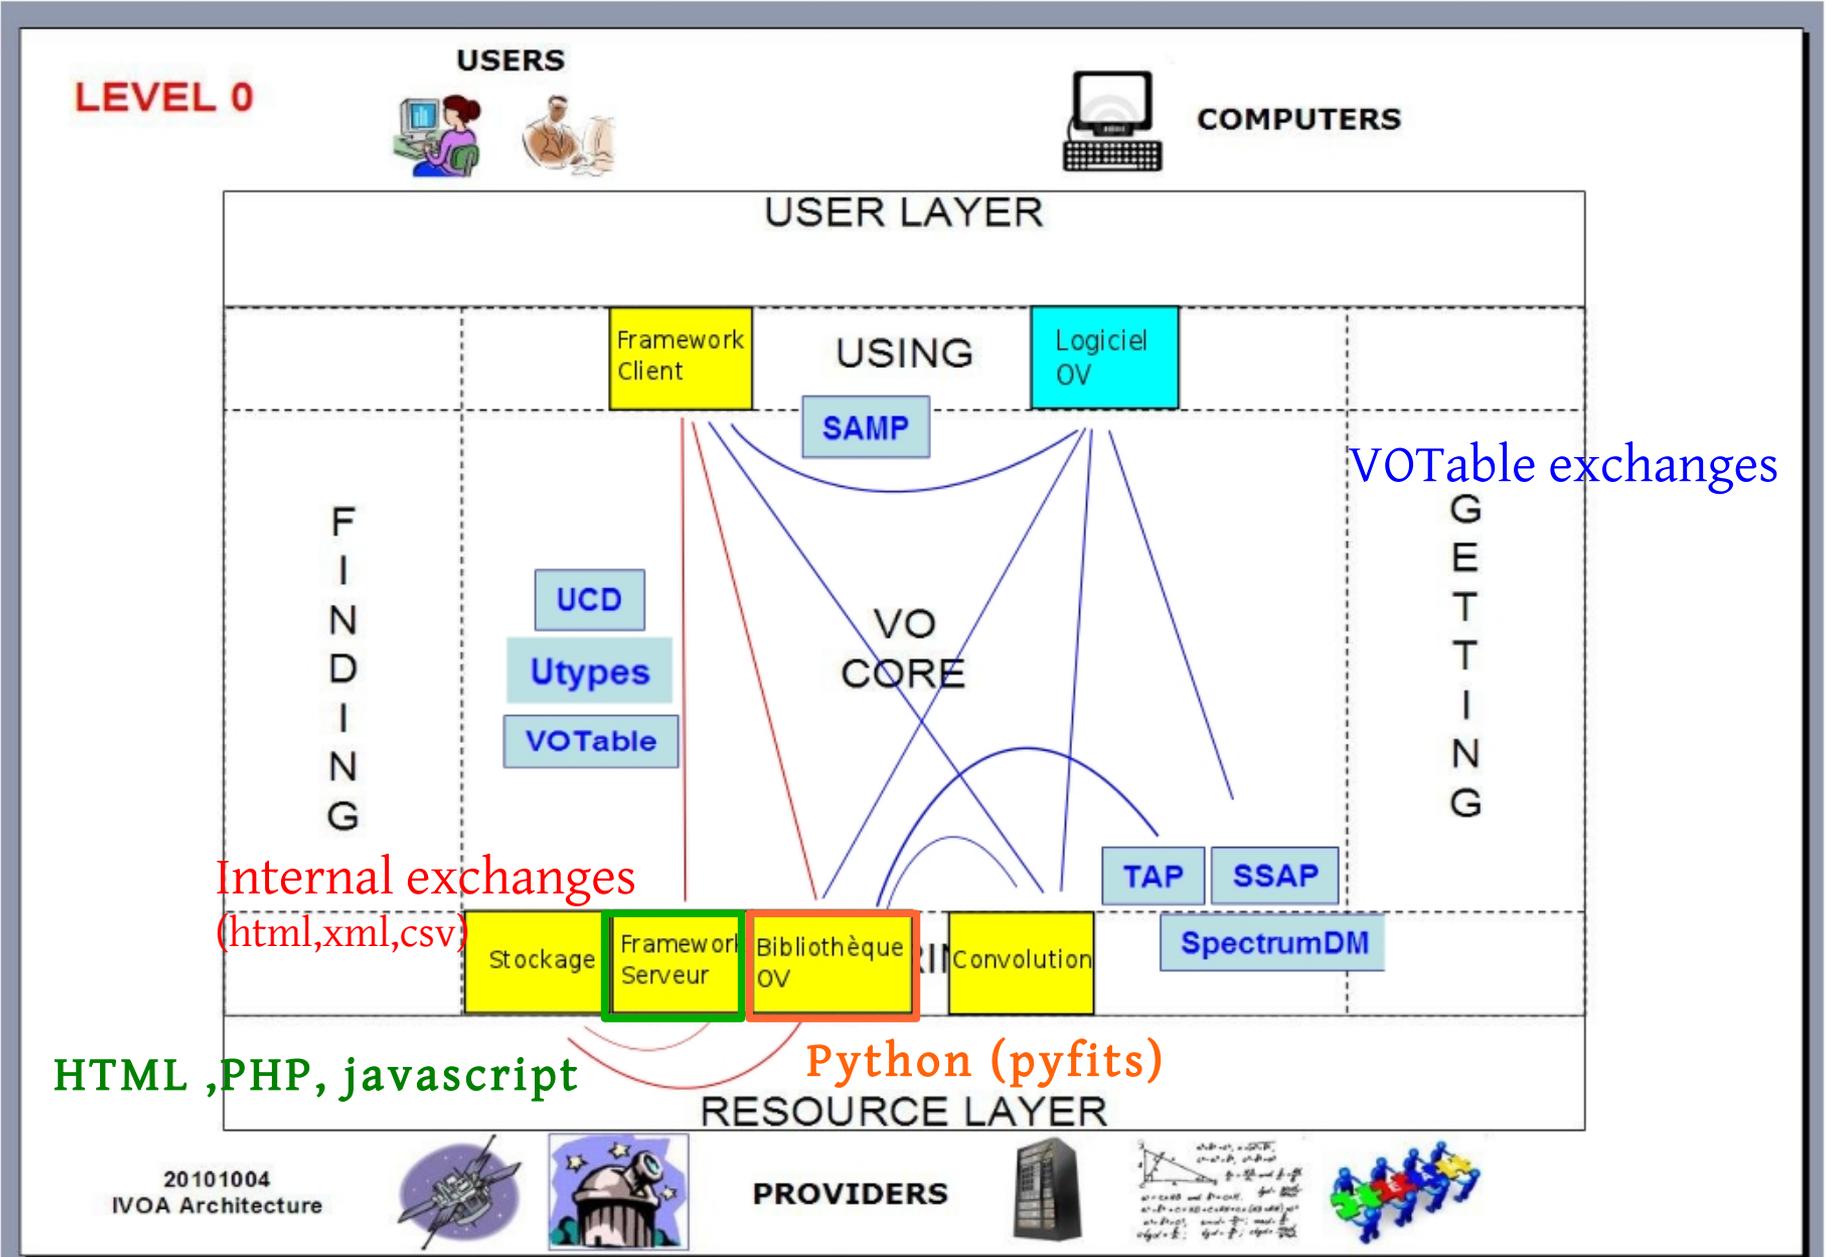

**It is by no means an automated tool to derive stellar parameters.**

VOSPECFLOW can be used to check

stellar activity

excess or deficiency of some chemicals in the atmosphere

# Homepage to VOSPECFLOW v2.0

**VOSPECFLOW**

Home Observed spectra Synthetic spectra

**WELCOME TO VOSPECFLOW**

This application is meant to transform portions of synthetic spectra (100 AA to 500 AA) into simulated observations to compare them with observed spectra.

To achieve this, VOSPECFLOW allows to perform a convolution of the synthetic spectra with a rotation profile, an instrumental profile and a turbulent microturbulence velocity profile, and to doppler shift it according to the radial velocity of the star it is meant to represent.

Through the tab "Observed spectra", you will be able to:

- select a star, retrieve its parameters from a query to SIMBAD and the catalogs in Vizier
- select the temperature, metallicity, gravity and microturbulence velocity from the results of the Vizier's catalogs query
- select and observed spectrum of the selected star from the TBLegacy database or upload your own spectrum
- store the selected spectrum into the VOTPSpace for further plotting (with VOSPEC or with a local display device) and/or downloading

Through the tab "Synthetic spectra", you will be able to:

- select a range in temperature, metallicity, gravity and microturbulence velocity according to the results of the Vizier's catalogs query
- search the POLLUX database for high resolution synthetic spectra corresponding to these parameters or upload your own spectra
- convolve portions of the selected spectra to transform them into simulated observations
- apply the doppler shift associated to the radial velocity of the star selected in the "Observed Spectra" tab
- store the resulting spectra into the VOTPSpace for further plotting (with VOSPEC or with a local display device) and/or downloading

Please connect to the VO-tool of your choice to further visualize your data

# 1 . Query for observations

The screenshot displays the VOSPECFLOW web interface. The main content area is divided into a 'QUERY' section on the left and a 'RESULTS' section on the right. In the 'QUERY' section, the 'Star ID' field contains 'HD232862' and the 'Catalog' dropdown is set to 'All'. Below these fields are buttons for 'Get parameters' and 'Show details'. The 'RESULTS' section shows the source 'Simbad' and its description: 'Source : Simbad query', 'Description : meta.main : None', 'src.class : \*\*', 'pos.eq.ra;meta.main : 059.333275', and 'pos.eq.dec;meta.main : 150.955156'. A red-bordered window titled 'Show details' is overlaid on the results, showing the 'Mean of stellar parameters' with input fields for '4900.0', 'None', 'None', and 'None'. Below this, a 'Details' section lists parameters with checkboxes: 'Source', 'phys.temperature.effective', 'phys.gravity', 'phys.abund.Fe', and 'phys.veloc.microTurb' are all checked. A table below shows the values for these parameters: 'I/61B', '4900', 'None', 'None', and 'None'. A red arrow points from the bottom right of the 'Show details' window towards the bottom right of the slide.

Bottom status bar: Last update : Friday, May 10 2013 @ 20:55 (CEST +2:00)

convolved portion of the spectrum stored in basket.  
The name bears the information of the convolution.

# 5. Visualize / download the data stored in the basket

The screenshot displays the VOSPECFLOW web interface. At the top, there are navigation tabs for 'Home', 'Observed spectra', and 'Synthetic spectra'. Below this is a search bar and a section for 'Convolutions of chosen synthetic spectrum'. The main area is divided into 'QUERY' and 'RESULTS' sections. A 'Cart spectras' window is open, showing a list of selected spectra with checkboxes for selection. The 'QUERY' section includes input fields for 'Central wavelength' (8525), 'Wavelength' (100), 'Macroturbulence velocity' (2), 'Rotational velocity' (21), 'Instrumental profile' (105), and 'Radial velocity' (0). The 'RESULTS' section shows a list of spectra with checkboxes for selection. The 'Cart spectras' window has a title bar with a close button and contains the following information:

- Central wavelength : 8525
- Wavelength width : 100
- CONV\_T2R21G105mA\_L8525\_W100\_M\_s5000g3.0z0.0t1.0\_a0.00c0.00n0.00o0.00r0.00s0.00\_VIS.spec.FITS
- hd232862\_narval\_26sep08\_int\_Normal\_I\_001\_tbl.fits
- NORMFLUX\_M\_s5000g3.0z0.0t1.0\_a0.00c0.00n0.00o0.00r0.00s0.00\_VIS.spec.FITS

At the bottom of the 'Cart spectras' window, there are icons for visualization and download, and a 'Message Type' section with radio buttons for 'votable (TOPCAT)' and 'ssa (VOSpec)'. A red bracket on the left side of the image points to the checkboxes in the 'Cart spectras' window, indicating that these are used to select data to be visualized or retrieved.

Checkboxes to select data to be visualized / retrieved

# 5. Visualize / download the data stored in the basket

The screenshot displays the VOSPECFLOW web interface. At the top, there are navigation tabs for 'Home', 'Observed spectra', and 'Synthetic spectra'. Below this is a search bar and a section for 'Convolutions of chosen synthetic spectrum'. A 'QUERY' section on the left contains various parameters: 'Synthetic spectrum selected from' (NORMFLUX\_M\_s5000g3.0z0.0t), 'Central wavelength' (8525), 'Wavelength' (100), 'Macroturbulence velocity' (2), 'Rotational velocity' (21), 'Instrumental profile' (105), and 'Radial velocity' (0). The 'RESULTS' section shows a 'Cart spectras' window with a list of items, each with a checkbox and a file name. The items are: CONV\_T2R21G105mA\_L8525\_W100\_M\_s5000g3.0z0.0t1.0\_a0.00c0.00n0.00o0.00r0.00s0.00\_VIS.spec.FITS (checkbox checked), hd232862\_narval\_26sep08\_int\_Normal\_I\_001\_tbl.fits (checkbox checked), and NORMFLUX\_M\_s5000g3.0z0.0t1.0\_a0.00c0.00n0.00o0.00r0.00s0.00\_VIS.spec.FITS (checkbox checked). Below the list are three icons: a plot icon, a monitor icon, and a download icon. A 'Message Type' section has radio buttons for 'votable (TOPCAT)' (selected) and 'ssa (VOSpec)'. At the bottom of the interface, there is a 'RESET' button and a 'Last update' timestamp: 'Monday, May 13 2013 @ 13:47 (CEST +2:00)'. On the right side, there is a 'CART' section with a shopping cart icon and a 'TOOLS' section with buttons for 'TOPCAT', 'VOSpec', 'Splat VO', 'VOPlot', and 'Cassis'.

Possibility to visualize in situ, send to a VO application, download (csv) (votable) (fits)

## 6. Quicklook using in situ tool

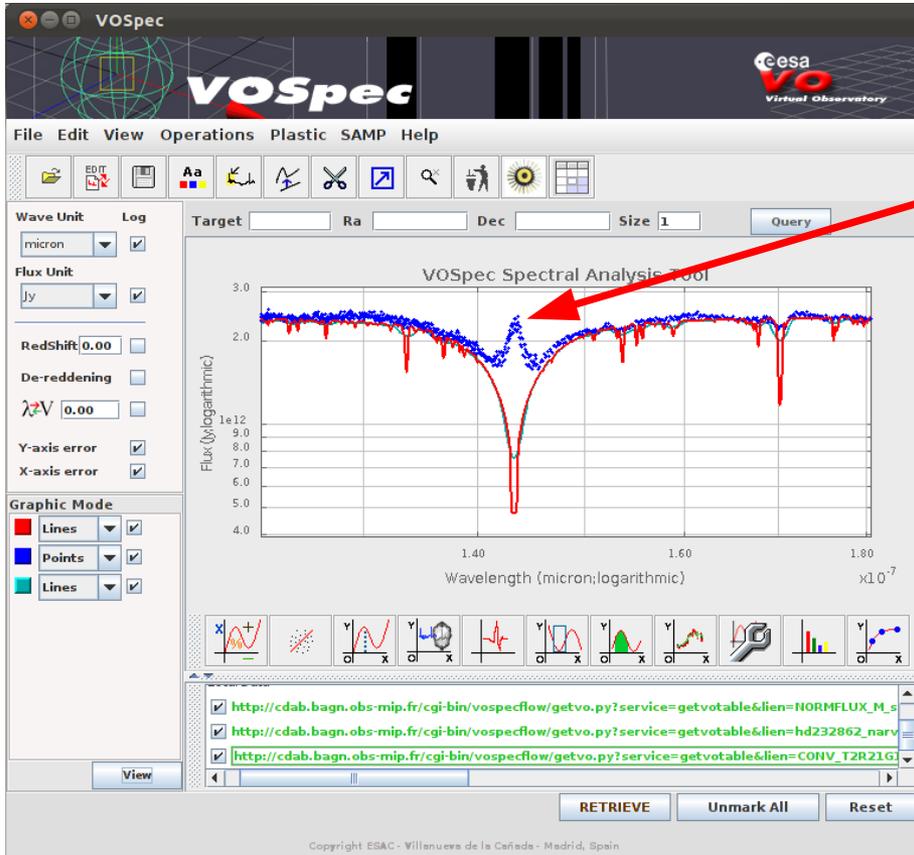

The screenshot displays the Vospecflow web application in a Mozilla Firefox browser. The browser's address bar shows the URL `cdab.bagn.obs-mip.fr/vospecflow/`. The page title is "VOSPECFLOW".

The main interface is divided into several sections:

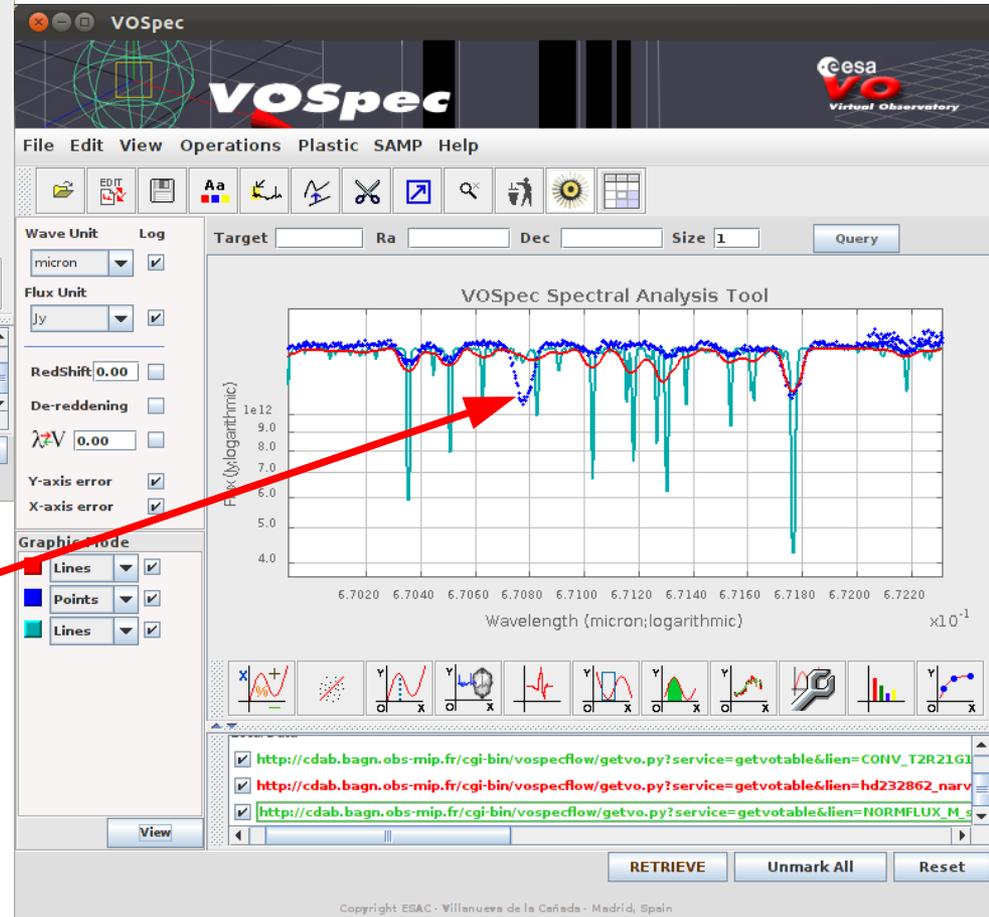

- Search and Convolutions:** A search bar for synthetic spectra and a dropdown menu for "Convolutions of chosen synthetic spectra".
- Parameters:** A list of parameters for the synthetic spectrum, including:
  - Synthetic spectrum selected from: `NORMFLUX_M_s5000g3.0z0.0t`
  - Central wave: `6700`
  - Wavelength: `100`
  - Macroturbulence velocity: `2`
  - Rotational velocity: `21`
  - Instrumental profile: `105`
  - Radial velocity: `0`
  - Output file format: (partially visible)
- Plot spectras:** A central plot showing a spectral line profile. The x-axis represents wavelength (6702 to 6712) and the y-axis represents flux (0.4 to 1.1). The plot displays a complex absorption line profile with multiple components. A red box highlights the bottom of the plot area, containing:
  - A "Message Type" section with two radio buttons: `votable (TOPCAT)` (selected) and `ssa (VOSpec)`.
  - Two icons: a yellow icon representing a spectral plot and a blue icon representing a download function.
- CART:** A shopping cart icon with "DRAG" and "DROP" labels.
- TOOLS:** A vertical list of tool buttons: `TOPCAT`, `VOSpec`, `Splat VO`, `VOPlot`, and `Cassio`.

No hub connected hence only in situ view and download are proposed

# Observed spectrum, theoretical spectrum and simulated observations seen in VOSpec

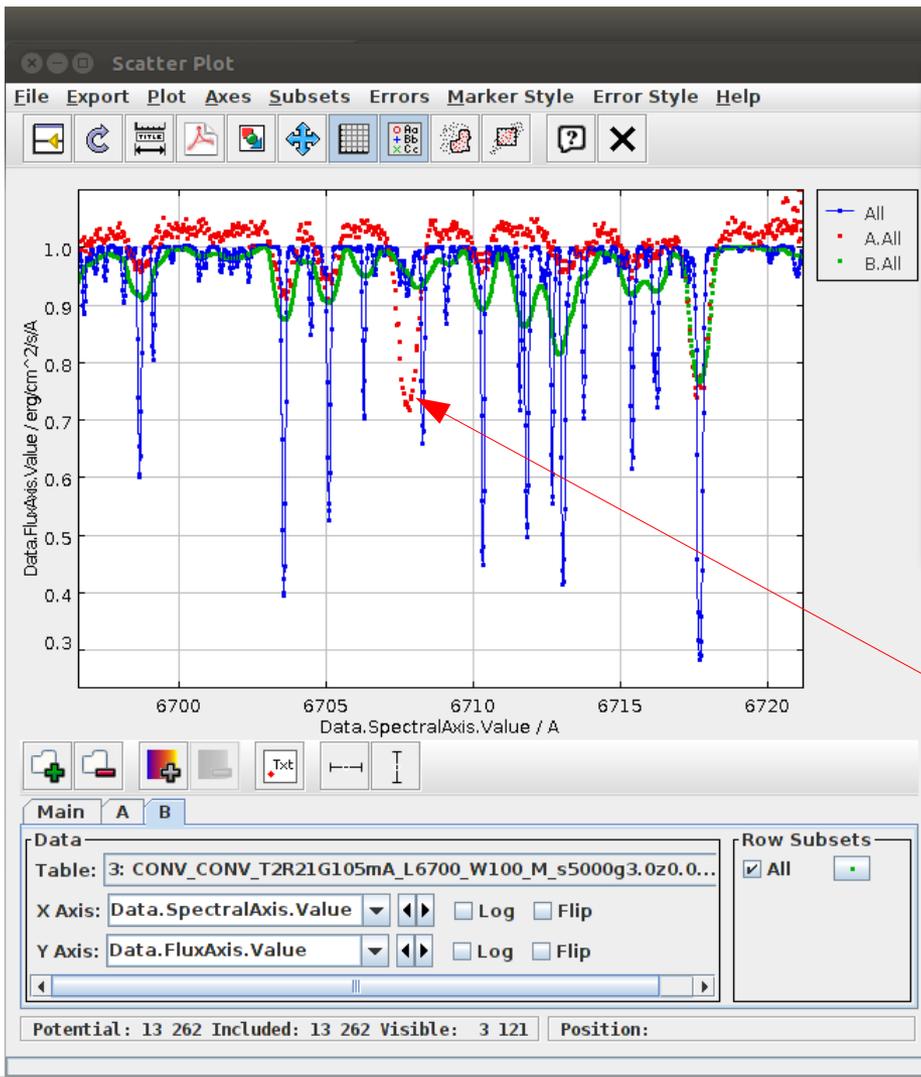

This star is active!

This star is Li-rich!

# Observed spectrum, theoretical spectrum and simulated observations seen in TOPCAT

TOPCAT interface showing the Table List and Current Table Properties. The Table List contains three entries: 1: FLUX\_NOR\_hd232862\_n, 2: normalizedflux\_NORMFI, and 3: CONV\_CONV\_T2R21G105. The Current Table Properties panel shows details for the selected table, including Label, Location, Name, Rows (5 001), Columns (2), Sort Order (↑), Row Subset (All), and Activation Action ((no action)  Broadcast Row). The SAMP Messages and Clients sections are also visible.

The star is Li-rich!

## Examples of Use

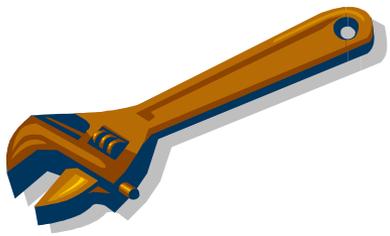

Tool to accompany spectroscopic observations (available to observers and telescope operators ), for instance, to check the pointing of the right object

Earlier in the process to simulate an observation  
– (then comes the ? of the noise modelling)

Afterwards to

produce rough constraints on stellar parameters ( $v_{\text{ini}}$ ,  $T_{\text{eff}}$ ,  $\log g$ , metallicity ...),  
allow to get a first grip on an analysis ,  
rapidly identify the presence/absence of specific spectral lines.

## What's next

Make the tool available to the community via the VO

Add a module to guess  $T_{\text{eff}}$  and  $\log g$  from spectral type and luminosity class

Provide a simple VO service for convolution

**Add other archives and theoretical databases**

# Nouvelle ergonomie à l'étude pour distribution de l'application

**VOSPECFLOW**  **Observed spectra** **Synthetic spectra** **CART**

Welcome to VOSPECFLOW

This application is meant to transform portions of synthetic spectra (100 AA to 500 AA) into simulated observations to compare them with observed spectra. To achieve this, VOSPECFLOW allows to perform a convolution of the synthetic spectra with a rotation profile, an instrumental profile and a turbulent microturbulence velocity profile, and to doppler shift it according to the radial velocity of the star it is meant to represent.

Through the tab "Observed spectra", you will be able to:

- select a star, retrieve its parameters from a query to SIMBAD and the catalogs in Vizier
- select the temperature, metallicity, gravity and microturbulence velocity from the results of the Vizier's catalogs query
- select and observed spectrum of the selected star from the TBLegacy database or upload your own spectrum
- store the selected spectrum into the VOTPSpace for further plotting (with VOSPEC or with a local display device) and/or downloading

Through the tab "Synthetic spectra", you will be able to:

- select a range in temperature, metallicity, gravity and microturbulence velocity according to the results of the Vizier's catalogs query
- search the POLLUX database for high resolution synthetic spectra corresponding to these parameters or upload your own spectra
- convolve portions of the selected spectra to transform them into simulated observations
- apply the doppler shift associated to the radial velocity of the star selected in the "Observed Spectra" tab
- store the resulting spectra into the VOTPSpace for further plotting (with VOSPEC or with a local display device) and/or downloading

Please connect to the VO-tool of your choice to further visualize your data

# Nouvelle ergonomie à l'étude pour distribution de l'application

The screenshot displays the VOSPECFLOW application interface. At the top, there are navigation tabs for 'Observed spectra' and 'Synthetic spectra'. A central 'CART' window lists four files with checkboxes: 'vega\_narval\_04jul09\_pol\_Fast\_V\_03\_tbl.fits' (checked), 'NORMFLUX\_A\_p10000g3.5z-1.0t2.0\_a0.00c0.00n0.00o0.00r0.s0.00\_VIS.spec.FITS' (unchecked), 'NORMFLUX\_A\_p10000g4.5z-1.0t2.0\_a0.00c0.00n0.00o0.00r0.s0.00\_VIS.spec.FITS' (checked), and 'CONV\_T2\_L8525\_A.p8000g4.0z-1.0t2.0\_a0.00c0.00n0.00o0.00r0.s0.00\_VIS.spec.FITS' (checked). To the right, a 'CART' sidebar features a shopping cart icon and a 'VO TOOLS' section with buttons for 'TOPCAT', 'VOSpec', 'Splat VO', and 'VOPlot'. A large white shopping cart icon is on the left. At the bottom, three action buttons (a monitor, a plot, and a download icon) are visible. A red text overlay 'Broadcast, display ou download depuis le panier' has three arrows pointing to these buttons. The footer shows 'Last update : 2013 / 03 / 05'.
