Cube Access prototype

- **Data Discovery via TAP + ObsCore or SIA-2.0 query**
 - returns ObsCore metadata
 - query response contains metadata to call DataLink service
- **DataLink service to find download URLs and service(s)**
 - supports multiple files per dataset
 - returns links/description of prototype access data capability
 - TODO: semantic markup for links
- **AccessData prototype not yet updated :-)**
 - accepts STC AstroCoordArea instead of simple WD params

DataLink in SIA query response

- **implemented a simple library (cadcSIA) in the OpenCADDC project**
 - parse all query params into usable objects
 - for those with ObsCore: generate ADQL query
 - for those using cadcUWS library: JobRunner implementation that connects all the parts (error handling sketchy)
 - for those with TAP+ObsCore: complete webapp that calls your TAP service (just needs some configuration)
- **unfortunately, not yet pushed to googlecode...**
