

Solar System Interest Group

- Goal: re-use and adjust VO standards for Solar System sciences (Sun, Planets, Comets...)
- <https://wiki.ivoa.net/twiki/bin/view/IVOA/IvoaSS>
email list: ssig@ivoa.net
- Chair: B. Cecconi (baptiste.cecconi@obspm.fr)
Co-chair: S. Joy (sjoy@igpp.ucla.edu)

Solar System Interest Group

IVOA Interop May-2020

- No specific SSIG session
- Planned contribution:
 - TDIG: VOEvent update for Solar System sciences
- Other hot topics:
 - New feature in TOPCAT: “Area plot”
 - Vocabularizing dataproduct_type: inputs from SSIG
 - Early prototype of Herschel EPN-TAP service
 - CNES willing to support Solar System VO activities
 - VESPA going on the Cloud with EOSC

TOPCAT Area plot

Early prototype of Herschel EPN-TAP service

ADQL Query

Parameters

- ADQL query: select * from herschel.epn_core

Result

Matched: 100

[Send via SAMP](#) [Quick Plot](#)

Query result probably incomplete due to the match limit kicking in. Queries not producing TOP 2000 by the machinery, so adding a TOP clause with a higher number may help.

VESPA-Cloud

- Supported by EOSC-EAP (European Open Science Cloud, Early Adopter Program)
- Use case:
a data provider can order a service to share its metadata in VESPA
- VESPA-Cloud will setup and maintain DaCHS servers on EOSC-hosted virtual machines (provided by IN2P3 and CESNET).
- Data providers will have:
 - a “seat” on a server to place their scripts+metadata
 - a gitlab repository to host and manage their scripts
- The VESPA-Cloud community AAI (Authentication and Authorization Infrastructure) is hosted on eduTEAMS
- More details here: <https://voparis-wiki.obspm.fr/display/VES/VESPA-Cloud>

This work uses the EGI infrastructure and EOSC-hub resources with the dedicated support of IN2P3 and CESNET. It is also supported by GEANT/eduTEAMS.
