Center Group

Science is about revising the data

*re-search*

1. Motivation
2. Scientific priorities
  1. Currently identified
  2. Upcoming
3. Re-fueling the CSP

# What does the IVOA provide?

1. *Visualization tools* -> SAMP, HiPS, (ST-)MOC, TopCat, Aladin, AladinLite
2. *Simple / easy access to data*  
-> registry, ObsCore, SAMP, TAP, SODA, SIA/SSA, HiPS, (ST-)MOC, Datalink
3. *reliable data*  
-> DataModels, Semantics
4. *relevant data*  
-> ??? (missing, links to papers?, data ratings?)  
-> **Special session on Radioastronomy in the VO**

# What does the IVOA provide?

## 5. *Fast computation on new data*

-> GWS, Computing resources close to the data, VOSpace interface for distributed storage

## 6. *Easy comparison tools between data and models/theory*

-> SimDAL, but models usually created by users..

## 7. *Data completeness and consistency*

-> Registry complete and consistent? Glots? -> **SODA/Datalink services?**

## 8. *Reproducible data representation*

-> Scripting interfaces, python wrappers?, ADQL, TopCat

The best way to make progress is via a constant **dialogue**:

*science* ↔ *technology*

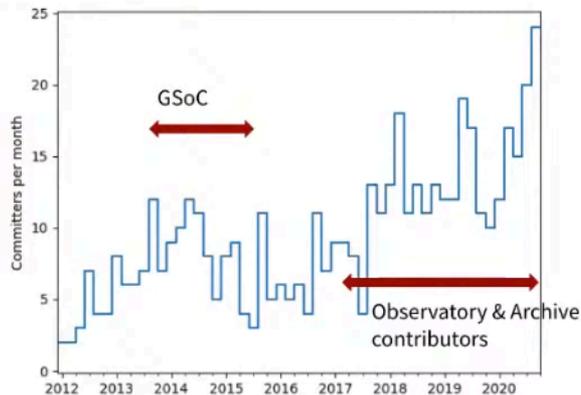

# Current scientific priorities at IVOA

- **Time-domain astronomy:** TIMESYS (light curves) and ST-MOC (discovery). -> Handling of alerts? GW triggers?
- **Multi-dimensional data:** spectral or time cubes (sky + wavelength/frequency or sky + time)
- **Upcoming priorities:**
  - **Python reference implementations** prioritized for major services (now with pyVo and better coordination with astropy)
  - Ways for accessing **large amounts of data** from future surveys?
  - Other growing areas/priorities?

## Astroquery team

- 3 volunteer maintainers
  - Clara Brasseur
  - Adam Ginsburg
  - Brigitta Sipócz
- Over 130 contributors, both data consumers & providers
  - undergrad and PhD students
  - Astronomers
  - Engineers
  - Archive scientists

ADASS2020 --- Brigitta Sipócz (DIRAC, UW) @AstroBrigi @bsipocz

## ADASS XXX

# Current scientific priorities at IVOA

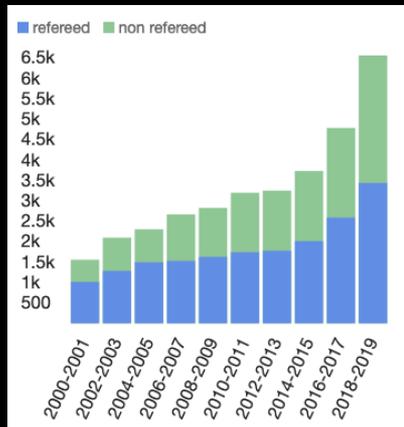

- **Time-domain astronomy:** TIMESYS (light curves) and ST-MOC (discovery). -> Handling of alerts? GW triggers?
- **Multi-dimensional data:** spectral or time cubes (sky + wavelength/frequency or sky + time)
- **Upcoming priorities:**
  - **Python reference implementations** prioritized for major services (now with pyVo and better coordination with astropy)
  - Ways for accessing **large amounts of data** from future surveys? (Theory/GWS session on science platforms this interop)
  - Other growing areas/priorities?

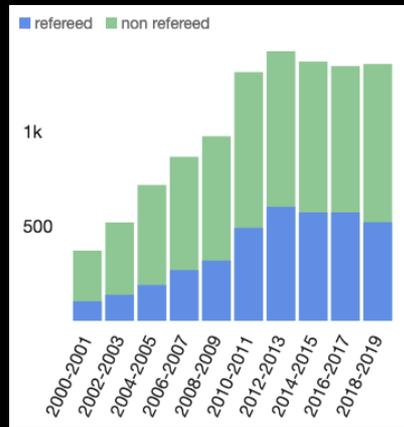

# Upcoming scientific priorities for the IVOA

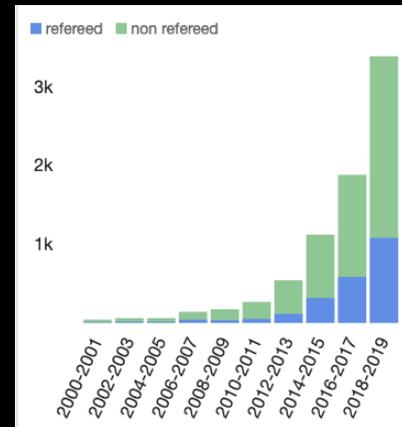

## Gravitational waves

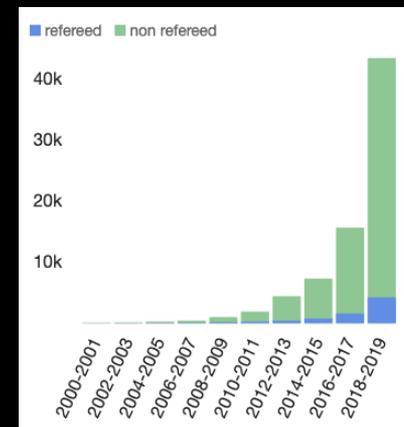

## Multi-wavelength

## Python

## Machine learning\*

ADS-listed articles containing those keywords as a function of time

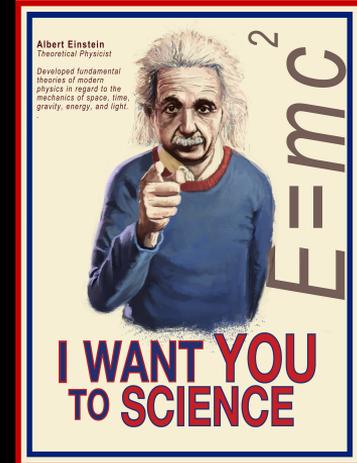

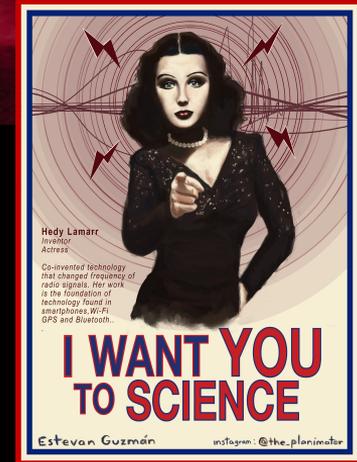

\* Possibly biased by size of other scientific fields

- Always try to ask the question: how is the user going to use this?
- Try follow the user workflow to the paper and keep the big picture (is provenance clear? Can I explain/make a plot of this?)
- Connect to the future generation of users where they are: e.g. python, github, open source projects, social media, online open fora, connected to new big astronomy projects, using mobile devices and expecting quick answers

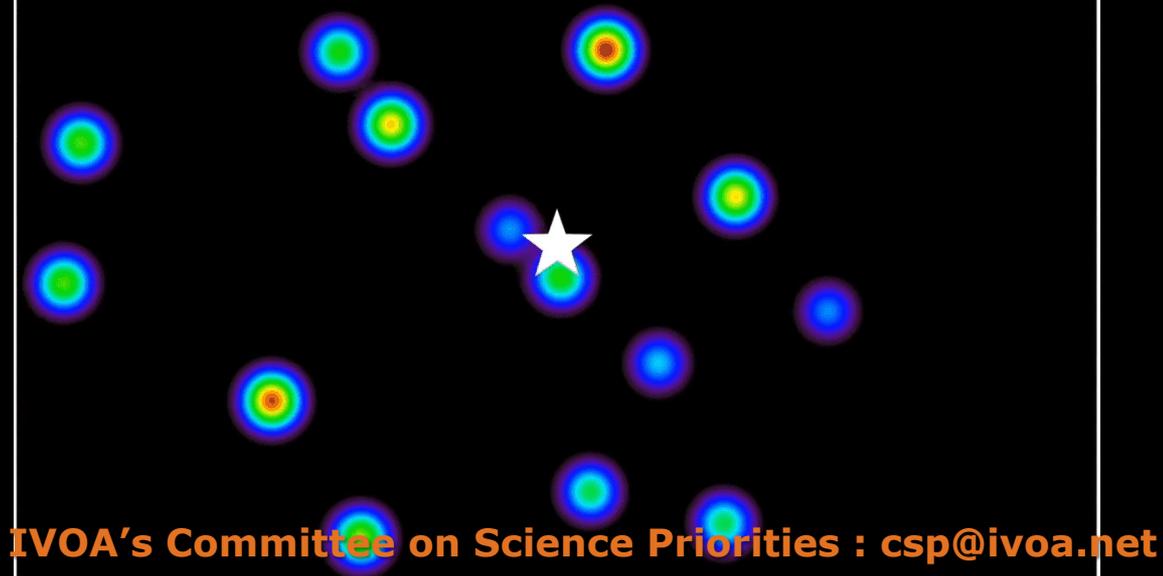

# Refueling the CSP

- **New charter**
  - Proactively liaising with large upcoming projects
  - Involving active scientists in and out of the VO
  - Champions: individuals pushing for specific scientific use-cases (what do you want?)
- **Interested? Please talk to us !**

1995.6

# Thanks!
