LOFAR DR1 VO services

Content

One year after establishing the Radio IG at IVOA more and more services serving radio data are being registered in the VO. One this is the service at Astron, which amongst other data is providing a pre data release of the LOFAR HBA Tier-1 (LoTSS-PDR).

With this short demonstration I want to show how the data access on the service is possible, how source catalogs are linked to image services and also the caveats and inconveniences that users may be facing.
