MWA Archive & VO Overview

November 2023, IVOA Radio IG, Tucson, Az. USA

Gurlgamarnu

Presented by Greg Sleap, Curtin University/ICRAR/MWA

Curtin University

About the MWA

- Mid-west Australia
- Operations mid 2013
- International collaboration of 20 led by Curtin University
- SKA Low Precursor
- 70-300 MHz, 30.72 MHz inst. bandwidth
- 3km or 6km max baselines
- 256 dual pol. tiles
- 50 PB raw data archive
- 4.7 FTE – v.small team!

Foreground: One MWA tile has 16 dipole antennas and a beamformer (right)

Inyarrimanha Ilgari Bundara - The Murchison Radio Astronomy Observatory (MRO)

MWA, ASKAP, SKA-Low, EDGES

RADIO QUIET ZONE

You are now entering the Murchison Radio-Astronomy Observatory

Please switch off and do not use your mobile and satellite phones or CB radio while inside the Observatory.

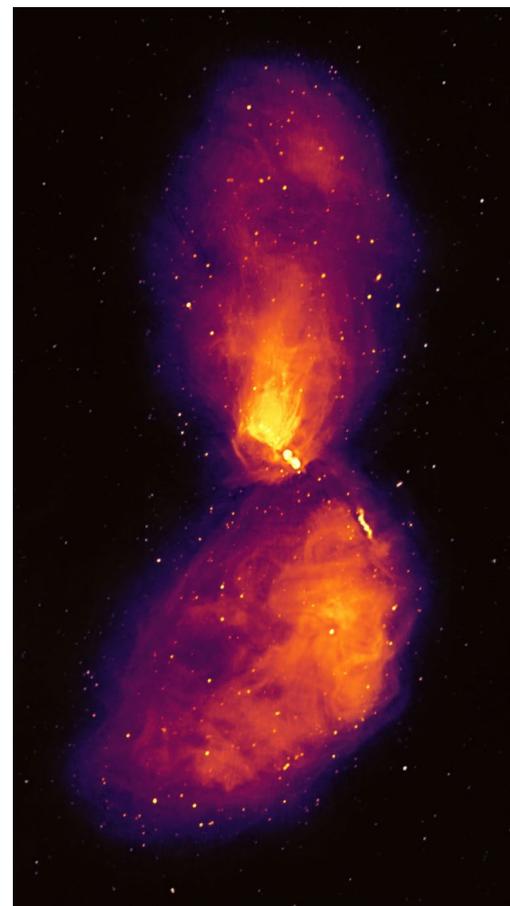

Please only use these devices in case of Emergency.

Your co-operation is appreciated

MWA: A Raw Data Archive

- **Raw voltages**
 - Three bespoke data formats over time (use **mwlib**)
 - Channelised (output of receiver's PFB)=24x 1.28 MHz
 - 0.781 us time resolution (~85 TB per hour)
 - Black belt MWA research groups
- **Raw uncorrected, uncalibrated visibilities**
 - Black belt MWA research groups
 - Bespoke MWA FITS format (use **mwlib**)
- **On-the-fly corrected, uncalibrated visibilities**
 - CASA MS or UVFITS
 - Pre-processed by **Birli**
 - Intermediate users do calibration themselves
- **On-the-fly corrected and calibrated* visibilities**
 - CASA MS or UVFITS
 - For “non-MWA radio astronomers”
 - * Calibration is **very** basic, but enough for simple/quick look imaging

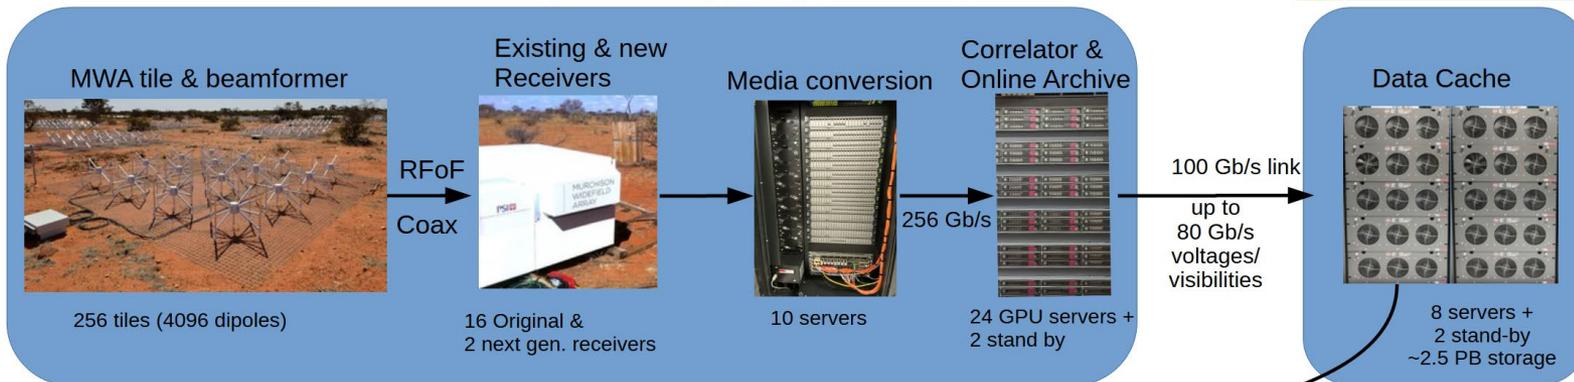

Cen A: Ben McKinley

MWA Data Flow

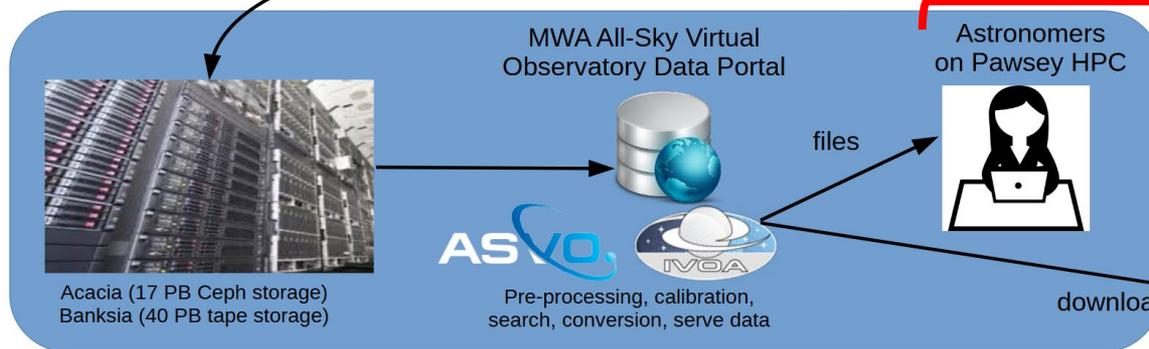

Tier 0: Murchison Radio Astronomy Observatory (MRO), Western Australia

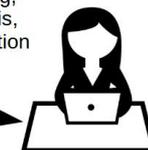

Tier 1: Curtin University, Bentley, Western Australia

100 Gb/s link
Voltages & visibilities

Responsibility of science groups

Processing,
calibration,
imaging,
analysis,
publication

Astronomers
around the world

E.g. GLEAM

Tier 2: Pawsey Supercomputing Centre, Kensington, Western Australia

MWA Public Data Access

Murchison Widefield Array All-Sky Virtual Observatory

Virtual observatory compatible metadata and downloadable public visibility data from the MWA Archive.

Image credit: Natasha Hurley-Walker (Curtin / ICRAR) and the GLEAM T

A project to make **MWA telescope** data available to radio astronomers.

In this phase, raw visibility sets are available, with options for calibration, averaging and conversion to measurement sets or uvfits.

Outage Notices

For service status updates and information about outages, please visit the MWA Wiki Service Outage Page.

[View current outages and service status](#)

Our Services

Web Dashboard

A web-based dashboard to search for observations and submit data conversion or download jobs.

[Learn more...](#)

Command Line Tools

Open-source command line clients for effortless MWA ASVO job submission and data download

[Learn more...](#)

VO TAP Service

We provide an International Virtual Observatory Alliance (IVOA) compliant Table Access Protocol (TAP) service.

[Learn more...](#)

MWA Public Data Access

- All-Sky Virtual Observatory (ASVO) <https://asvo.org.au>
 - 5 data portals (including MWA)
 - <https://asvo.mwatelescope.org>
 - Petabytes of data served to astronomers around the world!

MWA Services Provided

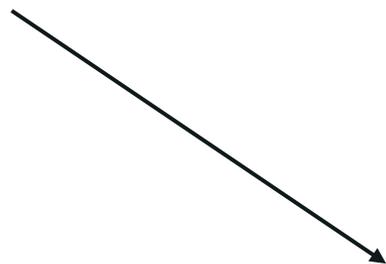

- MWA ASVO portal (Public and proprietary)

- Slightly federated A&A
- Web UI
- Command-line clients
- **VO interfaces (TAP, SCS)**

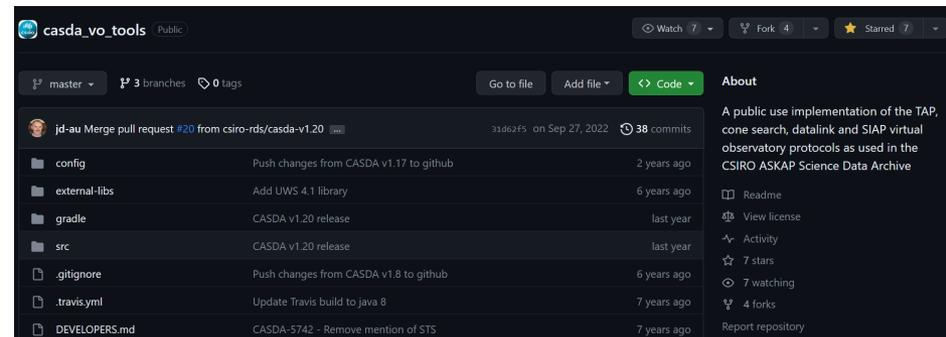

- Workflow:

- Login (or API key)
- Search (uses TAP service)
- Submit / monitor jobs
- Stage data (opt. preprocess)
- Download via URL or
- filesystem (Pawsey users)

CASDA VO Tools:
Thanks, James Dempsey!

<greg.sleep@curtin.edu.au>
An alternative, efficient and easy-to-use MWA ASVO client.
Source: https://github.com/MWATelescope/giant-squid
MWA ASVO: https://asvo.mwatelescope.org

USAGE:
  giant-squid <SUBCOMMAND>

OPTIONS:
  -h, --help  Print help information

SUBCOMMANDS:
  list          List ASVO jobs
  download     Download an ASVO job
  submit-vis   Submit ASVO jobs to download MWA raw visibilities
  submit-conv  Submit ASVO conversion jobs
  submit-meta  Submit ASVO jobs to download MWA metadata (metafits and cotter flags)
  submit-volt  Submit ASVO jobs to download MWA voltages
  wait        Wait for ASVO jobs to complete, return the urls
  help        Print this message or the help of the given subcommand(s)
```

The observation in search

TAP: MWA.Observation

- **Start/stop time** in GPS, MRO, UTC, MJD
- **Proposal info** (code, PI, description)
- **Modes** (Voltages, Correlator, fringe-stopping, etc)
- **Pointing** (LST, gal, ra/dec, az/el, Sun, Moon, Jup)
- **Frequency info** (channels, bandwidth, low, high & centre channel in MHz & ordinal number)
- **Correlator info** (frequency res, integration time)
- **Quality info** (tiles, good_tiles, iono_qa, errors)
- **Data info** (types, deleted, archived, downloads)
- Full schema is documented on the **MWA wiki**

Motivations for TAP design

- Make mwa.observation “one stop shop”
- Machine AND human readable
- Use MWA terminology
- Unification of data portal search and TAP
- Simple
 - Denormalised
 - No joins or complex ADQL required for most use cases
 - Don't make the user write code if they don't have to!

VO & FAIR Next Steps/Challenges

- Get TAP service in a registry (!)
- Add more metadata to TAP
- Add support for Astroquery
- Pivot from *inward* focus to *outward* (*Radio IG!*)
- MWA archive serves “raw” data- very high barrier to entry and access- try to lower the bar!
- Moving users/code close to data a challenge when it’s not your compute facility!
- Data not directly accessible (staging required)
- How can we be FAIR-er?

Thank you
