

Radio and millimetric Data in the Virtual Observatory : State of the art and open questions

F.Bonnarel (CDS)

On behalf of ... many Interop Partners

Summary

- 0) political context
- I) science ready data / visibility data
- III) relevant VO achievements or ongoing work
 - Discovery : obstap/Siap2
 - Access : DataLink and SODA
 - Interfaces : Aladin, TOPCAT
 - Discovery + Access + View : MOC and HiPS
- IV) working implementations
 - HiPS cubes distributed by CDS
 - ALMA implementations
 - ASKAP data : CASDA implementations
- V) What next ?
 - « extend » « science ready data » implementations
 - Discovery of visibility data
 - « fine grain » characterisation of visibility data
 - Integrating Visibility data processing in VO landscape
 - Visibility data representation ?

Radio cubes in the VO political context

- « Multi-D » IVOA priority driver
 - Set of protocols
- ALMA, LOFAR, ASKAP in VO landscape.
 - First IVOA standards implementations
 - Asterics discussions in Europe
- SKA perspective
- ESCAPE CEVO in Europe : ESFRI projects / VO experts
 - Asterics/Escape meeting in Strasbourg

Radio data in the VO

Science ready data (imaging cubes)

versus

Visibility / raw data

Radio data Cubes (science ready)

- ALMA
- LOFAR, ASKAP, JIVE
 - Towards SKA
- various surveys at CADC or CDS
- Two different strategies :
 - 2 steps strategy
 - data discovery by selecting criteria on metadata
 - Data acces : extraction of « useful » data in discovered « datasets »
 - AllSky discovery, access and visualisation : HiPS

Data discovery : ObsTAP

- Data discovery by selecting criteria on description attribute (metadata)
- ObsCore 1.1 (addition to ObsCore 1.0):
 - Size in pixels
 - Polarisation
- Served by TAP → ObsTAP
- ObsTAP : allows to select datasets on criteria such as `dataprodct_type= cube` and characterisation of axes
- REC may 2017

Data discovery : SIAP 2.0

- SIAP 2 : allows queries for image and cubes with PARAMETERS such as : DPTYPE = cube
- POS = « STC shape», BAND = 0.0005 0.0006, TIME = 52618 53700 etc.
- REC december 2015

Towards access :

→ DataLink

- Full data retrieval via `access_reference` column in ObsCore
- Or access to DataLink ... an SODA cutouts

DataLink

- {links} endpoint :
link a list of RESOURCES (metadata, other formats, associated data, services...) to a DataSet via a small VOTable giving url, media type, sémantics, etc..
- DataLink « service descriptor »
A « resource » to describe a service (included in main DAL service or {links} endpoint response)
- REC June 2015
- DataLink 1.1 proposal (july 2019)

Data access

- Data access : extracting useful data from the datasets
 - Full retrieval cumbersome (radio cubes are « huge »)
 - Cutouts : SODA 1.0 REC may 2017
 - Eventually regridding, reprocessing -> SODA -next (virtual data)
 - More metadata/modelling for finer description ?

Interface : Aladin

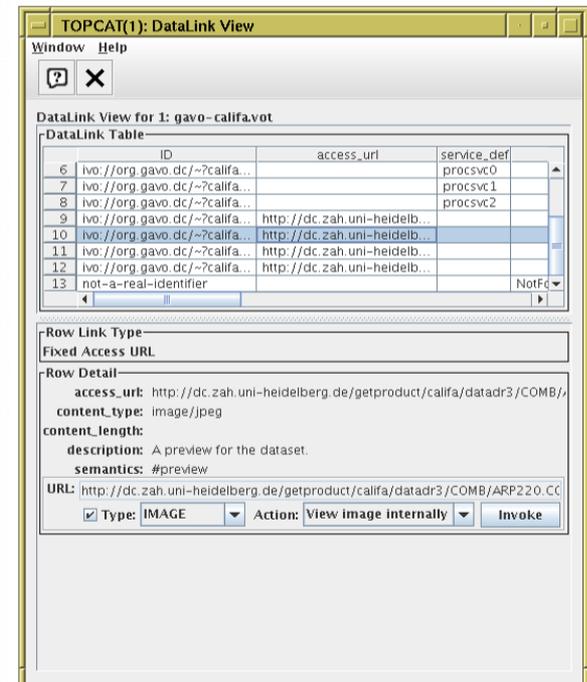

- Recent developments : discovery tree, SIA interface, DataLink and SODA interface
- TAP interface
 - ADQL control and assistance
 - Synchronous, asynchronous modes
 - JOINS
 - UPLOAD

The screenshot displays the Aladin web interface. On the left, a 'Server selector' dialog box is open, showing a 'Table: basic' and a 'Join: (CDS/Simbad) TAP_UPLOAD AladinTable1'. Below this, there is a text area for a query: 'Select TOP 9999 main_id, ra, dec, pmra, pmdec, SQRT(POWER(pmra,2)+POWER(pmdec,2)) as pm from basic WHERE SQRT(POWER(pmra,2)+POWER(pmdec,2)) > 20'. The 'Check..' button is set to 'SYNC'. Below the query editor are 'Reset', 'Clear', 'SUBMIT', and 'Close' buttons. On the right, the main interface shows a star field with several objects highlighted in green. A 'Welcome to Aladin' sidebar is visible on the far right. At the bottom, a table displays the results of the query.

main_id	ra	dec	pmra	pmdec	pm

Interface : TOPCAT

- TOPCAT is an ObsTAP interface
 - Discovery, SAMP to other tools
- TOPCAT takes into account DataLink
 - Feedback
 - Improvement proposals

VO data modelling

1) Obscore : metadata for discovery

obs_collection	unitless	String	Name of the data collection
obs_id	unitless	String	Observation ID
obs_publisher_did	unitless	String	Dataset identifier given by the publisher
access_url	unitless	String	URL used to access (download) dataset
access_format	unitless	String	File content format (see in App. BB.5.2)
access_estsize	kbyte	integer	Estimated size of dataset in kilo bytes
target_name	unitless	String	Astronomical object observed, if any
s_ra	deg	double	Central right ascension, ICRS
s_dec	deg	double	Central declination, ICRS
s_fov	deg	double	Diameter (bounds) of the covered region
s_region	unitless	String	Sky region covered by the data product (expressed in ICRS frame)
s_xel1	unitless	integer	Number of elements along the first spatial axis
s_xel2	unitless	integer	Number of elements along the second spatial axis
s_resolution	arcsec	double	Spatial resolution of data as FWHM
t_min	d	double	Start time in MJD
t_max	d	double	Stop time in MJD
t_exptime	s	double	Total exposure time
t_resolution	s	double	Temporal resolution FWHM
t_xel	unitless	integer	Number of elements along the time axis
em_min	m	double	Start in spectral coordinates
em_max	m	double	Stop in spectral coordinates
em_res_power	unitless	double	Spectral resolving power
em_xel	unitless	integer	Number of elements along the spectral axis

VO data models

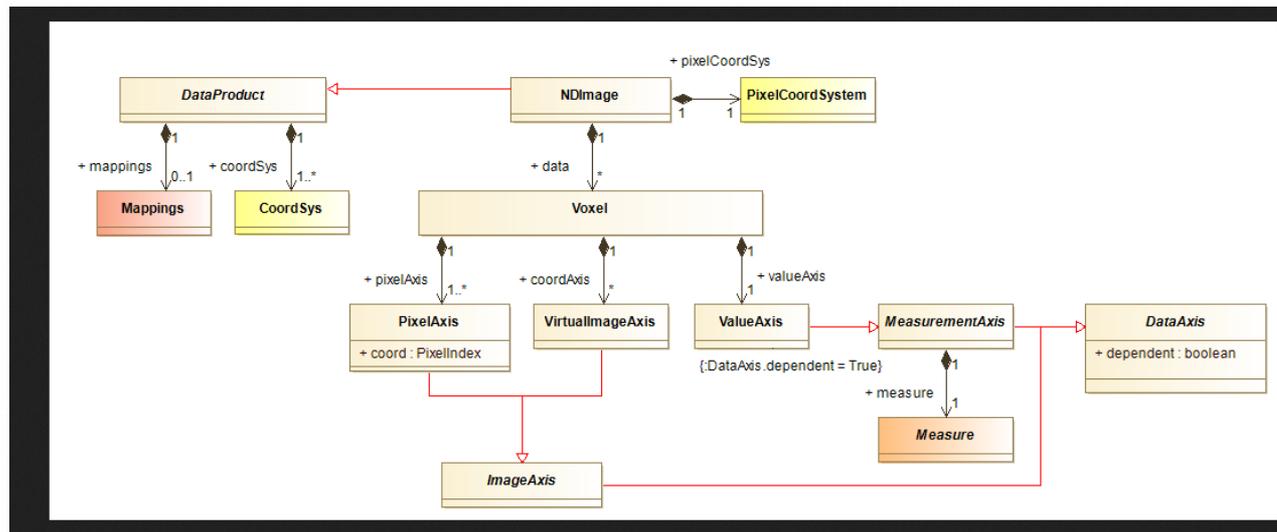

2) Other existing datamodels

- STC : useful concepts, currently in major revision
 - > Coords, Measurements and Transformations – see below
- PhotDM : mainly for optical domain
- Characterisation 1.0 : generic model reused by other models (Obscore, Cube) . In revision
- Spectral Line Data Model : From observations to Physics
- Simulation data model and SimDAL protocol.
 - Observation/Simulation comparison

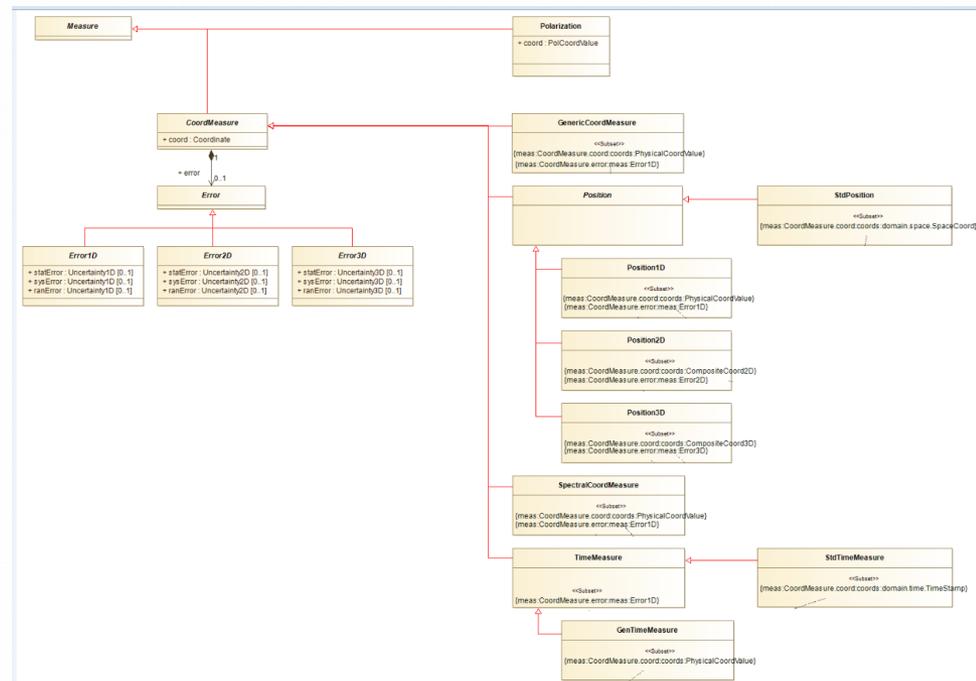

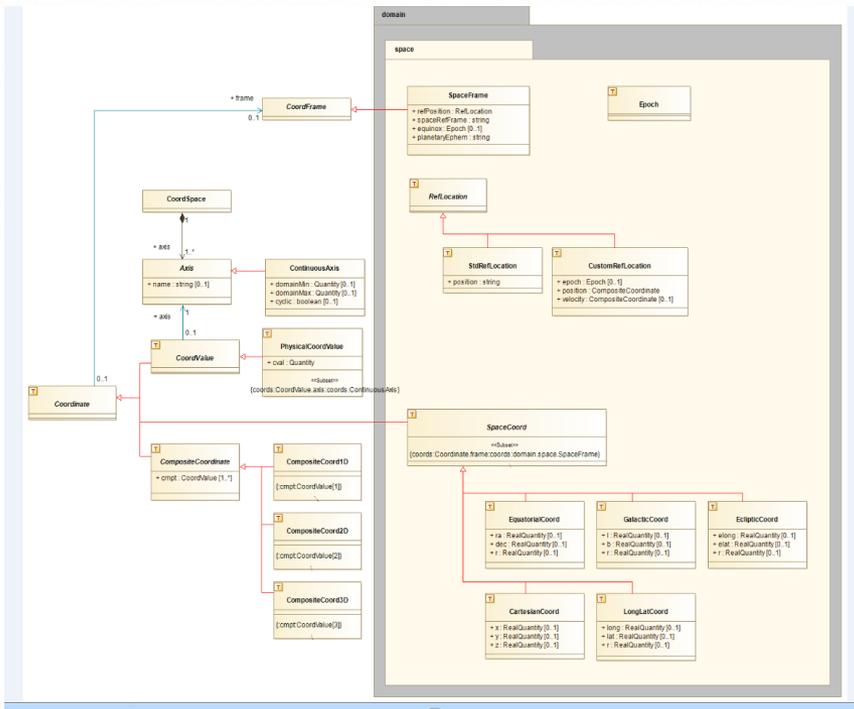

VO data modelling

3) Cube datamodel (in progress) : ND Image

VO data modelling

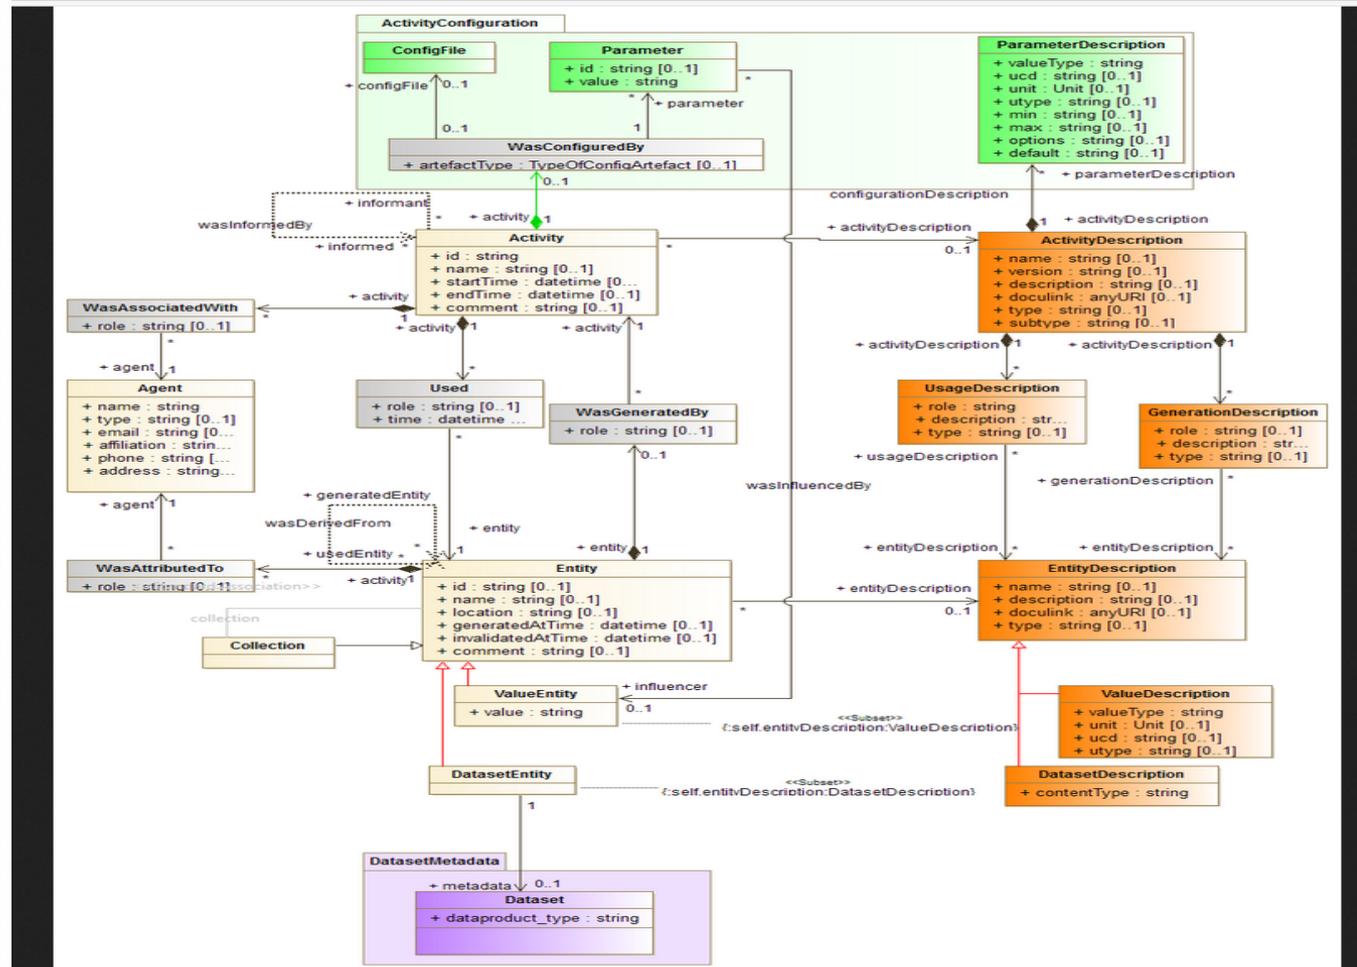

4) Coords and measurements (work in progress)

VO data modelling

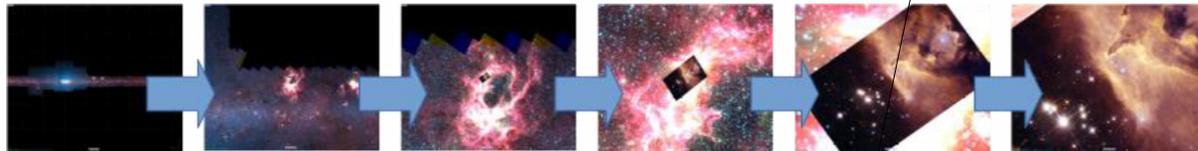

5) Provenance (work in progress)

ActivityAndConfigurationDescriptionForPR2_1502.png

□ HiPS ? What is it ?

- **H**ierachical **P**rogressive **S**urvey
"The more you zoom in on a particular area, the more details show up"
- Multi-resolution **HEALPix** data structure
- for **Images**, **Catalogues**, 3-dimensional data **cubes**, ...
- **Conserves scientific** data properties alongside visualisation considerations
- No databases or dedicated servers are required, just http

3

And MOC for discovery :
indexation by HEALPIX cell

View, Access, Discovery of DataCube

Don't forget

- SAMP for Desktop applications
- UWS : standard interface to manage VO Web Services
- VOSpace : for data storage
- Registry

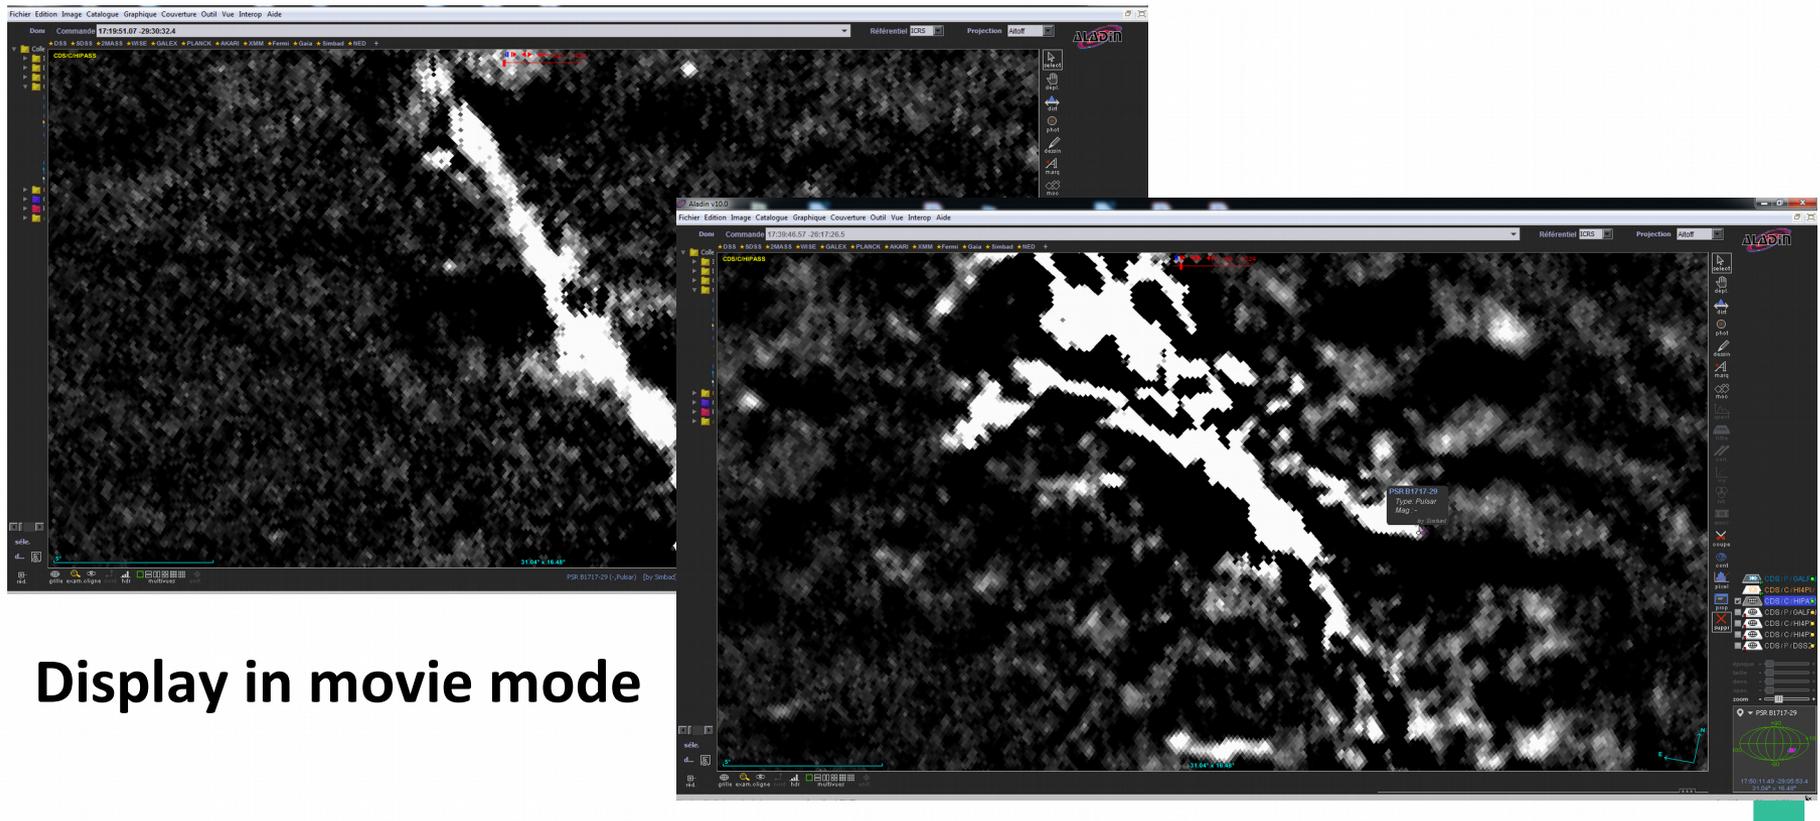

Existing « science ready »
radio data VO services

HiPS Cubes

- HI4PI (Effelsberg), GALFAHI (Arecibo), and HIPASS (Australia)

ALMA science archive

- ALMA provides interferometric data in millimetric domain
- Native interface available
- Imaging cubes not yet available for all observations
(but in progress)
- ALMA archive delivers step by step VO interface elements:
 - ObsTAP service available (next slides)
 - SAMP in client
 - MOC available
 - Integrated in ESA Sky (with AladinLite)
 - Projects : DataLink, SIAV2
 - UWS web service for reprocessing planned

ALMA science archive ObsTAP service in Aladin

ALMA science archive

url in the ObsCore response points to a native interface page in the browser

The screenshot shows the ALMA Science Archive web interface in Mozilla Firefox. The browser address bar displays the URL: `almascience.eso.org/aa/?member_ous_id=uid://A001/X145/X199`. The page title is "ALMA Science Archive".

The interface includes a navigation menu on the left with "Available data → 21973 / 219" and a "Command" input field. Below the menu is a "DSS5 color" image of a star field. The main content area shows a search result for project 2013.1.00623.S, with a table of data and a corresponding image of a star field.

Project code	Source name	RA	Dec	Band	Integration	Release date	Velocity resolution	Frequency support
2013.1.00623.S	ESO005-G004	06:05:41.72	-86:37:55.0	6	1300.320	2016-12-12	38006.03	227.81_246.51GHz

The table also includes columns for "Filter:", "More columns", and "Showing 1 of 1 rows".

ASKAP data : CASDA services

- CASDA implemented
 - MOC
 - ObsTAP, and SIA services available
 - DataLink with Cutouts
 - SODA interface
 - VO Scripts available

CASDA (= ASKAP data) (availability of cube data on the sky)

The screenshot displays the Aladin software interface, version 10.0 (BETA VERSION based on v10.073). The main window shows a sky map with several red selection boxes. A dialog box titled "CSIRO ASKAP Science Data Archive Image Access Service ..." is open, showing "Coverage: 433.2^{sq}" and options for "Access mode & derived prod.", "in view", "custom", and "space cov.". The interface includes a menu bar (File, Edit, Image, Catalog, Overlay, Coverage, Tool, View, Interop, Help), a Command line, and a right-hand sidebar with various tools and a "Welcome to Aladin" message. The bottom status bar shows "360° x 180°" and a search bar with "casda" entered.

ASKAP data : CASDA services DataLink

The screenshot displays the ALADIN software interface, a tool for astronomical data visualization and management. The main window shows a large-scale astronomical image with a zoomed-in inset of a specific region. The interface includes a menu bar (File, Edit, Image, Catalog, Overlay, Coverage, Tool, View, Interop, Help), a toolbar with various icons for navigation and analysis, and a sidebar with a tree view of data collections. A search results table is visible at the bottom, listing data products with their access URLs and sizes.

ASKAP data : CASDA services extracted spectrum

The screenshot displays the ALADIN software interface, which is used for astronomical data visualization and analysis. The main window shows a star field with a central star highlighted in pink. A dialog box titled "Service casda.csiro.au" is open, allowing the user to define a cutout for spectrum extraction. The dialog box contains the following fields:

- Target (ICRS, name): 16 27 46.15903 -25 44 54.2702
- Radius: 25.26'
- Time: (empty)
- Band: 0.21015484916529545 0.220026116655881
- Pol: (empty)
- ID: |AwjdlcT1HiEg7251deobNLMEEsqZ3bmz
- ASync: (dropdown menu)

Buttons at the bottom of the dialog box include "Reset", "Clear", "Submit", and "Close". The background shows a star field with a coordinate grid. The bottom right corner features a small map of the sky with a pink dot indicating the target location. The status bar at the bottom indicates "0 sel / 8 src 345Mb".

ASKAP data : CASDA services extracted spectrum

The screenshot displays the Aladin v10.0 software interface, which is used for astronomical data visualization and analysis. The main window shows a 'Cutout prototype for SODA server' dialog box with the following fields:

- Target (ICRS, name): 16 25 18.95162 -26 02 18.7137
- Radius: 2.704'
- Time: [empty]
- Band: 0.21015484917063945 0.2200261166617463
- Pol: [empty]
- ID: ERxaCEZ6GfBcQEBVu8wpW4ALYUAttPIA
- ASync: [dropdown menu]

Buttons at the bottom of the dialog are: Reset, Clear, Submit, Close.

A 'job controller' window is open in the foreground, showing a list of jobs:

- Completed jobs of current session:
 - Completed, Start time: 2019-01-10T02:00:39.680+0800 (server: [SODA]casda.csiro.au)
 - Completed, Start time: 2019-01-10T02:07:04.558+0800 (server: [SODA]casda.csiro.au)
- Jobs already submitted:
 - Job ID: [input field]
 - Buttons: Load from /results/result, ABORT, DELETE, Delete on closing Aladin (checked)
- Job URL: http://casda.csiro.au/casda_data_access/data/async/880a27f9-8ba9-4dc0-8046-7a3a66d58f1c
- Buttons: LOAD

The 'FITS header' window is also visible, showing the following parameters:

```
SIMPLE = T / conforms to FITS standard
BITPIX = -64 / array data type
NAXIS = 3 / number of array dimensions
NAXIS1 = 1
NAXIS2 = 1
NAXIS3 = 1024
DATAMIN = -8.0000000E+00
DATAMAX = 3.2000000E+01
BMAJ = 2.583334E-01
BMIN = 2.583334E-01
BPA = 0.0000000E+00
BUNIT = 'Jy' / Brightness (pixel unit)
EPOCH = 2.000000000000E+03
LONPOLE = 1.800000000000E+02
CTYPE1 = 'RA--SIN'
CRVAL1 = 2.462500000000E+02
CDEL1 = -6.666667014360E-02
CROT1 = 0.000000000000E+00
CRPIX1 = 3.
CUNIT1 = 'deg'
CTYPE2 = 'DEC--SIN'
CRVAL2 = -2.600000000000E+01
CDEL2 = 6.666667014360E-02
CROT2 = 0.000000000000E+00
CRPIX2 = 3.
CUNIT2 = 'deg'
CTYPE3 = 'VELO--HEL'
CRVAL3 = -4.024387640672E+05
CDEL3 = 1.319132129105E+04
CROT3 = 0.000000000000E+00
CRPIX3 = 68.
CUNIT3 = 'km/s'
```

CADC and others

- CADC has a couple of Radio cube surveys such as
 - CGPS
 - ALMA
 - VLASS
- Plans at NRAO (collab with CADC?)
- Italian
- Others ? Sorry if any !!!

SIAV2 + DataLink + SODA at CADAC

The screenshot displays the ALADDIN software interface. The main window shows a star field with a central cutout window. A 'Server selector' dialog is open, showing fields for 'Target (ICRS, name)', 'Radius', 'Time', 'Band', 'Pol', and 'ID'. The 'Target (ICRS, name)' field contains '05 32 57.25 -11 57 20.5'. The 'Radius' field contains '2.904°'. The 'Band' field contains '8.424999999999999E-5 1.1576E-4'. The 'Pol' field contains 'I', 'Q', and 'U'. The 'ID' field contains 'adIRIS/1170B4H0'. The 'SUBMIT' button is highlighted in red. The interface also shows a 'Data access' panel on the left, a 'Basic controls' panel on the right, and a 'Projection' dropdown set to 'Sinus'. The ALADDIN logo is visible in the top right corner.

Location: 05:32:35.25 -11:09:55.8

Frame: ICRS Projection: Sinus

Basic controls:
Type any object name or coordinates for moving on it.
Select catalog sources for displaying associated data measurements.

Server selector

Cutout

Cutout prototype for SODA sync server ?
Fill in all these fields and press the SUBMIT button

Target (ICRS, name)	05 32 57.25 -11 57 20.5
Radius	2.904°
Time	
Band	8.424999999999999E-5 1.1576E-4
Pol	I Q U
ID	adIRIS/1170B4H0

Time Domain ?

See Ada's talk on Saturday

What else ?

- A) extend « science ready data » availability in the VO .
 - Create new ObSTAP/SIAV2/DataLink/SODA services
 - Create HiPS for moment/continuum maps and access « original data »
- B) Visibility data (=VD) – what should be investigated/done :
 - Use ObsTAP/SIAP2 for VD rough discovery
 - VD fine grain characterisation and discovery
 - Integrate VD processing in VO landscape
 - VD VO representation/data modelling ?
- C) Others ? (Rotation measures, ...)

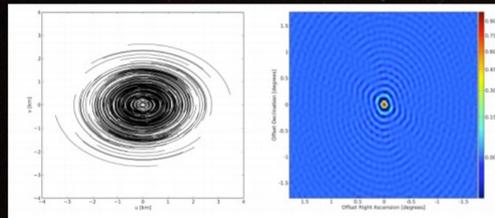

Visibility data?

(courtesy LOFAR/ASTRON partners)

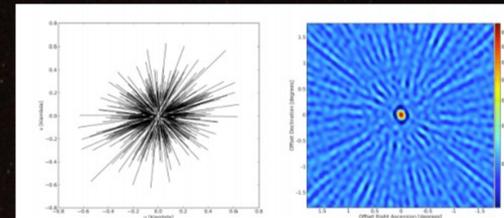

Data Types: Visibilities

ASTRON

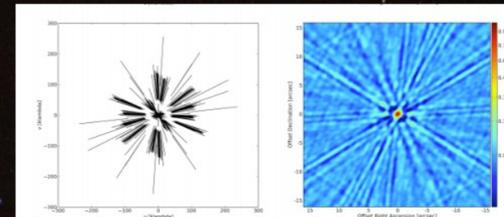

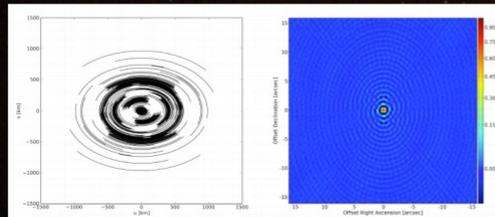

- Interferometer: Creating virtual aperture up to $\sim 2000\text{km}$ (λ/D)
- Incomplete coverage
- Typical use of Radio Telescopes: imaging depending on science
- LOFAR: Projection effects (No moving dish/mirror)

6 hours

1 second

Use ObsTAP/SIAP2 for VD rough discovery

- ObsCore has « visibility » dataproduct type
- Visibility data have rough spatial position/extension, time range, spectral range, polarisation
 - *roughly fit in ObsCore*
- Complex data structure can be searched via CAOM extensions ?

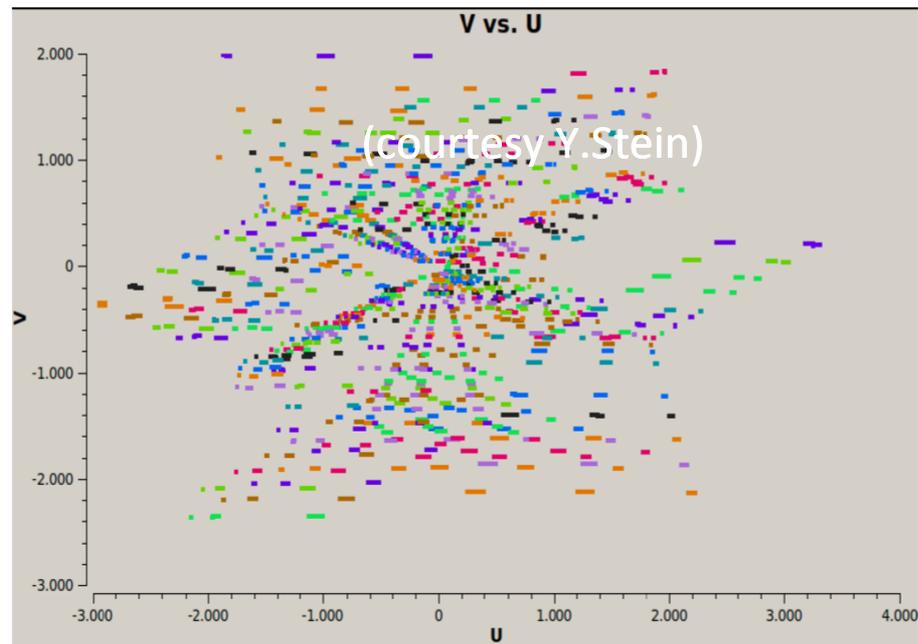

VD fine grain characterisation and discovery

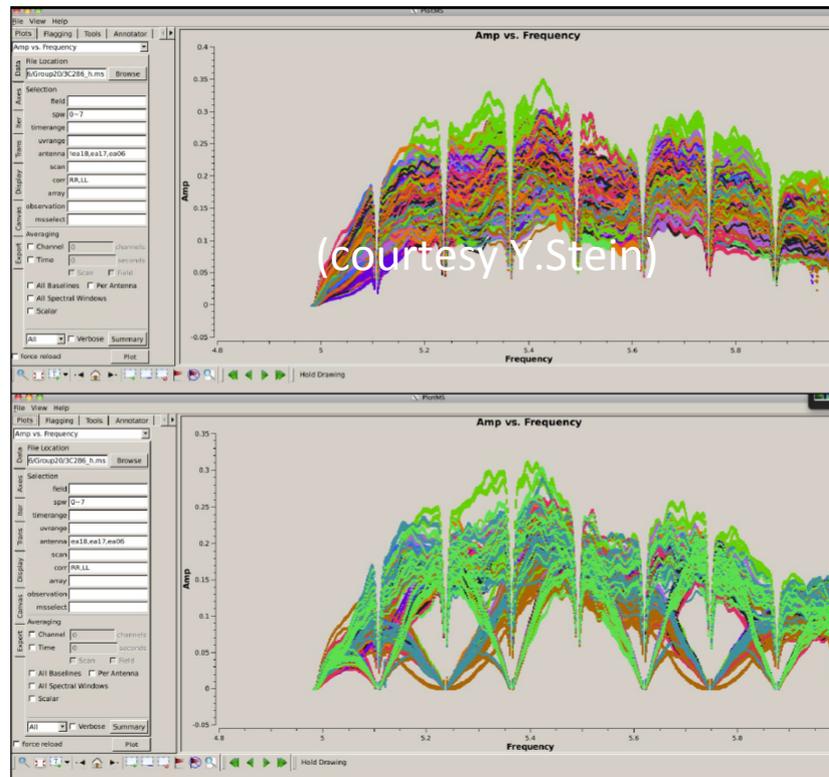

- « coarse grain » discovery via ObsCore + DataLink for additional metadata
 - UV plots
 - frequency/amplitude or phase/amplitude plots
 - Beam size and shape
 - Number of antennas, instrumental details
 - should we integrate this in « characterisation » DM ?
- Dynamic characterisation according to scientific goals : VO Web Service or VO application ?

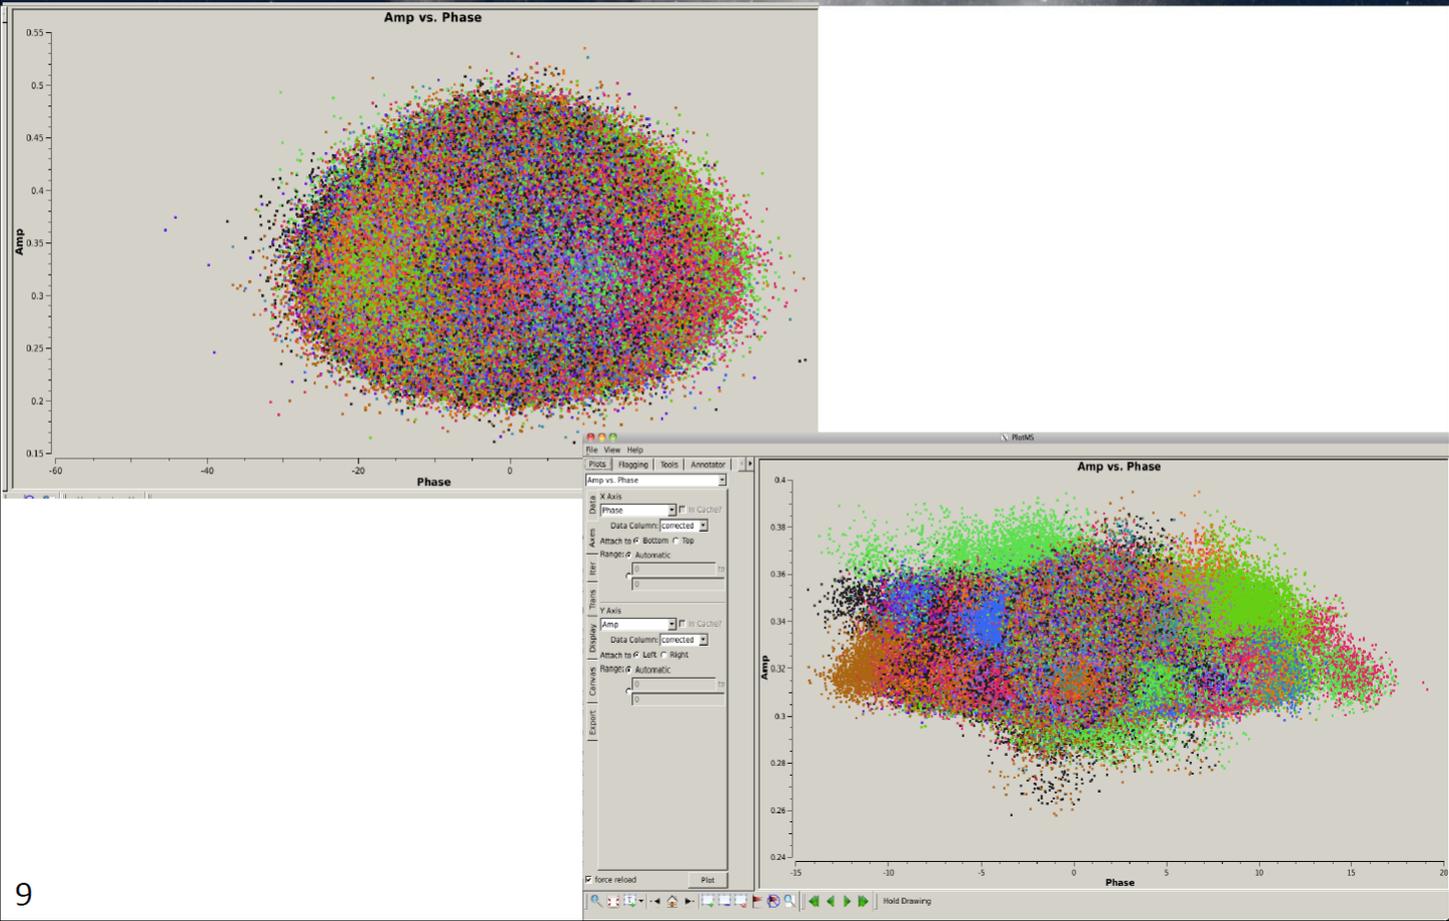

□ Uv coverage

□ Amp vs. Freq

□ Amp vs. phase

Integrate VD processing in VO landscape

- Use « provenance » to go back to original data
- Store and Make available science data reduced by individual scientists
- Propose a black box service providing « science ready data » according output characterisation
- Launch CASA code remotely close to the data
- Bring code to the data (docker/ jupiter notebook / platform)

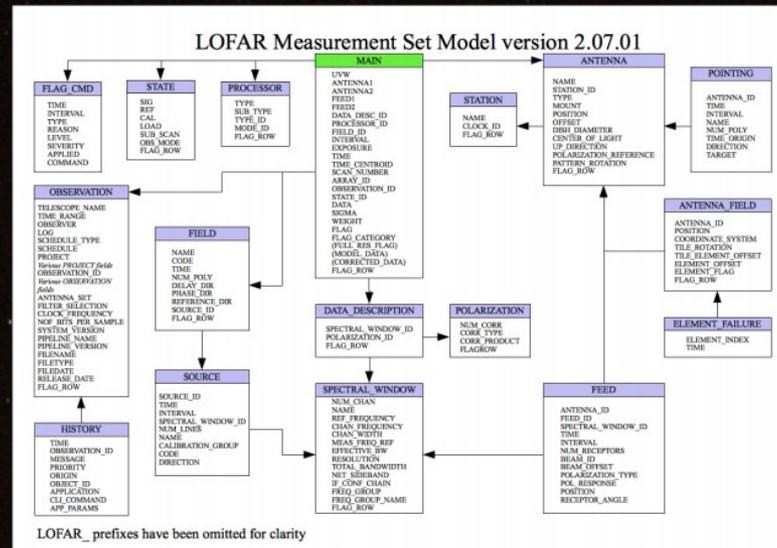

Visibility data modelling/representation

« measurement sets » are all what we need ?

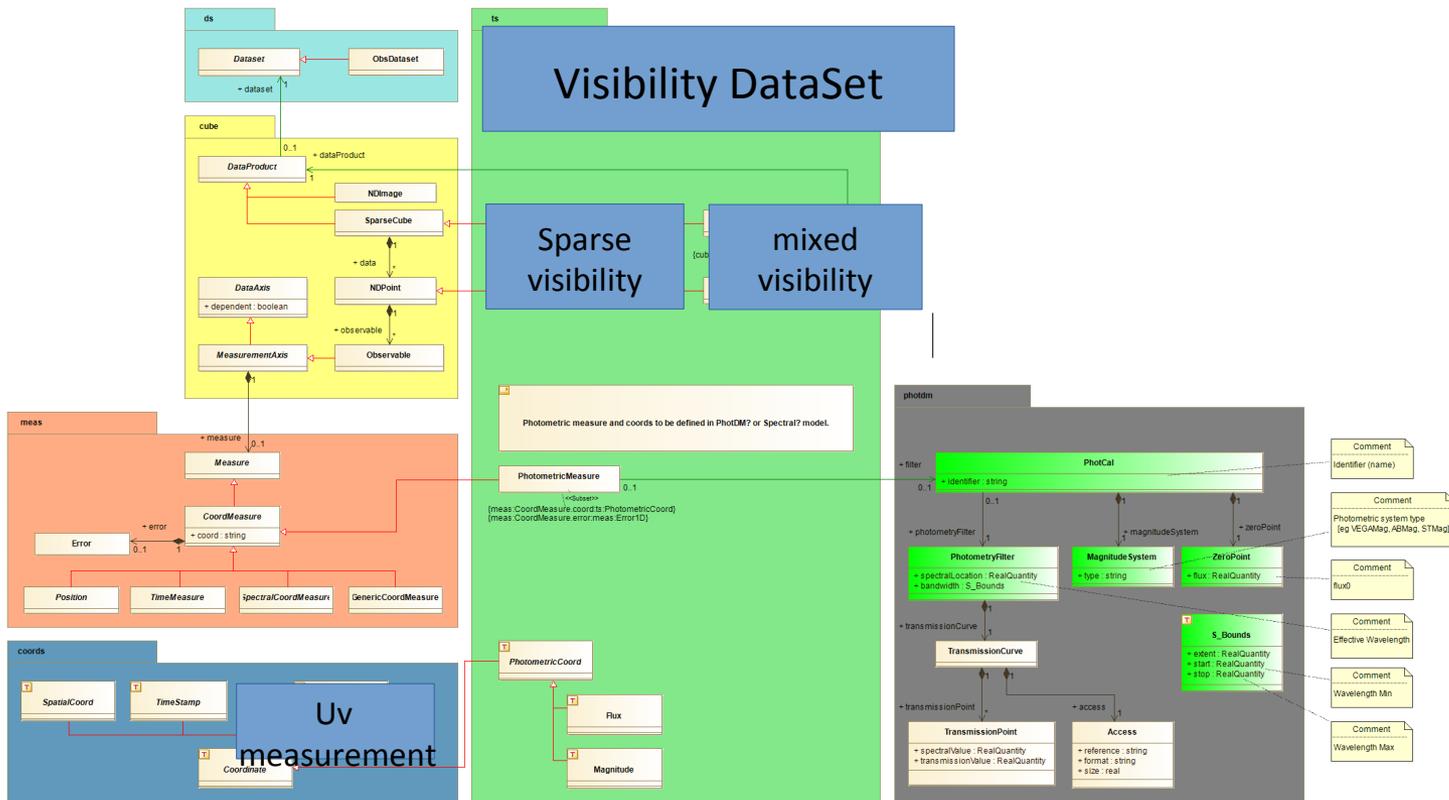

Data Types: Visibilities

ASTRON

- Stored as CASA Measurement Sets
 - 10 MB - 100 GB in size, per 192 kHz frequency band
 - Usually 400-488 per observation
 - Relational structure
 - Each cell can have multiple dimensions (pol x freq)

IVOA Visibility data model as an extension of CubeDM ?

Why : transform into time series, event lists, etc ? Combination with other spectral domains
