Observation/ Characterization 2/ Provenance (F.Bonnarel,CDS)

Contributors

- This status doesn't mean they all agree with all what I am presenting, but that their participation and comments helped me to present this.
- Mireille Louys, Anita M. S. Richards, François Bonnarel, Igor Chilingarian, Fabien Chereau, Andreas Wicenec, Jonathan Mc Dowell, Gerard Lemson, Alberto Micol, Peter Skoda (all above from Cambridge UK meeting)

Juan de Dios Santander Vela, Nausicaa Delmotte, Miguel Cervino, Arnold Rots, Carlos Rodriguo, Gretchen Greene, Tamas Budavari, Alex Szalay, Bruno Rino, Thomas Boch, Doug Tody

Goals: satisfy use cases

- Characterization 1 and new sort of data: polarized data.
- Observation container : a use case for NVO footprint service. ---> see demo by Gretchen and Tamas tomorrow.
- Provenance: describing Filter transmission curve and access to Progenitors
- Characterization of complex data (« a la « WFPC2) and integration of spectral response

Polarization

- Should we choose the simple axis or multi axis mode ?
- What to put in polarized flux resolution and sampling ? (minimal meaningful difference)
- Do we need a « Polarization axis » enumerating the list of Polarization states available?

Observation container

- Hook Characterization and footprints to DatasetID and Curation
- Basic structure is coming from Spectrum data model
- Use cases:
 - Footprint service (see demo by tamas and gretchen Tommorow)
 - VOSPACE « intelligent retrieval » (discussion with Dave Morris)
- Able to Hook provenance
- Comment from Doug (which I agree with): similar to generic dataset concept (see discussion in DAL tommorow)

×

Provenance ?

- Work out the Observation Config elements?
- Work out the ProcessingStages elements types : mosaic, confidence map, calibration, etc..
- Add an « ambient conditions » subclass.
- For transmission curve use an IVOA spectrum instance with no Target, no spatial nor time char, relative flux. (caution: differences between utype list and xml schema)

Characterization 2

- More complex $? \rightarrow$ not that much
- Moments variation Maps -→ statistical charac (meet SimDB needs?)
- parametric description questionned → use standard xml description for that.
- New »enumeration« feature for Pol Axis?

Contests, Issues (discussed on Wednesday DM2?)

- Format:
 - promote JSON (instead or in parallel ?) to xml
 - VOTABLE questionned and FITS « forgotten » (I disagree on both !)
- Units and coordinate systems
 Should we fix them to ICRS/SI (I disagree again)
- Relationship with DAL and applications
 - SIA2, DAL architecture, Generic dataset (tommorow SAL session)
 - Demo using Charac metadata in a Workflow (Thursday morning)

What to do next?

- Participate to side-meeting on this (Tuesday 5:15/6:40)
- Check and criticize the examples
- Build UML and xml schema on top of that.
- Provide consistent examples in xml, votable FITS and maybe JSON.
- Write the working draft.
