

# **AstroDAbis annotating objects via TAP interfaces**

**Norman Gray** and Bob Mann

University of Glasgow, University of Edinburgh, UK

*IVOA Interop, Naples*

*2011 May 18*

**JISC**

**University  
of Glasgow**

- Short project (Mar–Sept 2011), funded by JISC
- Primary goal: store cross-match results as stand-off annotations: “object M in catalogue A is the same as object N in catalogue B”
- Secondary: “object M in catalogue A is a quasar”
- Secondary: Linked-Open-Data interface
- Plus: “my-catalogue” service (small catalogues)
- Builds on previous RGM work (AstroDAS) and well-used BioDAS system

- OGSA-DAI to do the cross-matches
- Linked-Open-Data service will use IVOA vocabularies where appropriate
- TAP interfaces all round
