

Characterisation Version 2.0
F Bonnarel, I.Chilingarian, M.Louys
+ others ?

Characterisation version 2.0

- Content : fixing missing features (data providers feedback)
 - New specialized axes, fixed utypes
 - Composed data sets
 - Level 4 (= variation maps)
- After years: Internal draft ready.
 - Released,
 - Going soon to Working draft
 - New authors
- Today, usage: ObsTap and « BestFit » WebService

Where does characterisation
Changes with version 2 ?

- PSF
- New specialized Axes
- enumeration of Discrete values
- composed data / glob char
- level 4

New axes

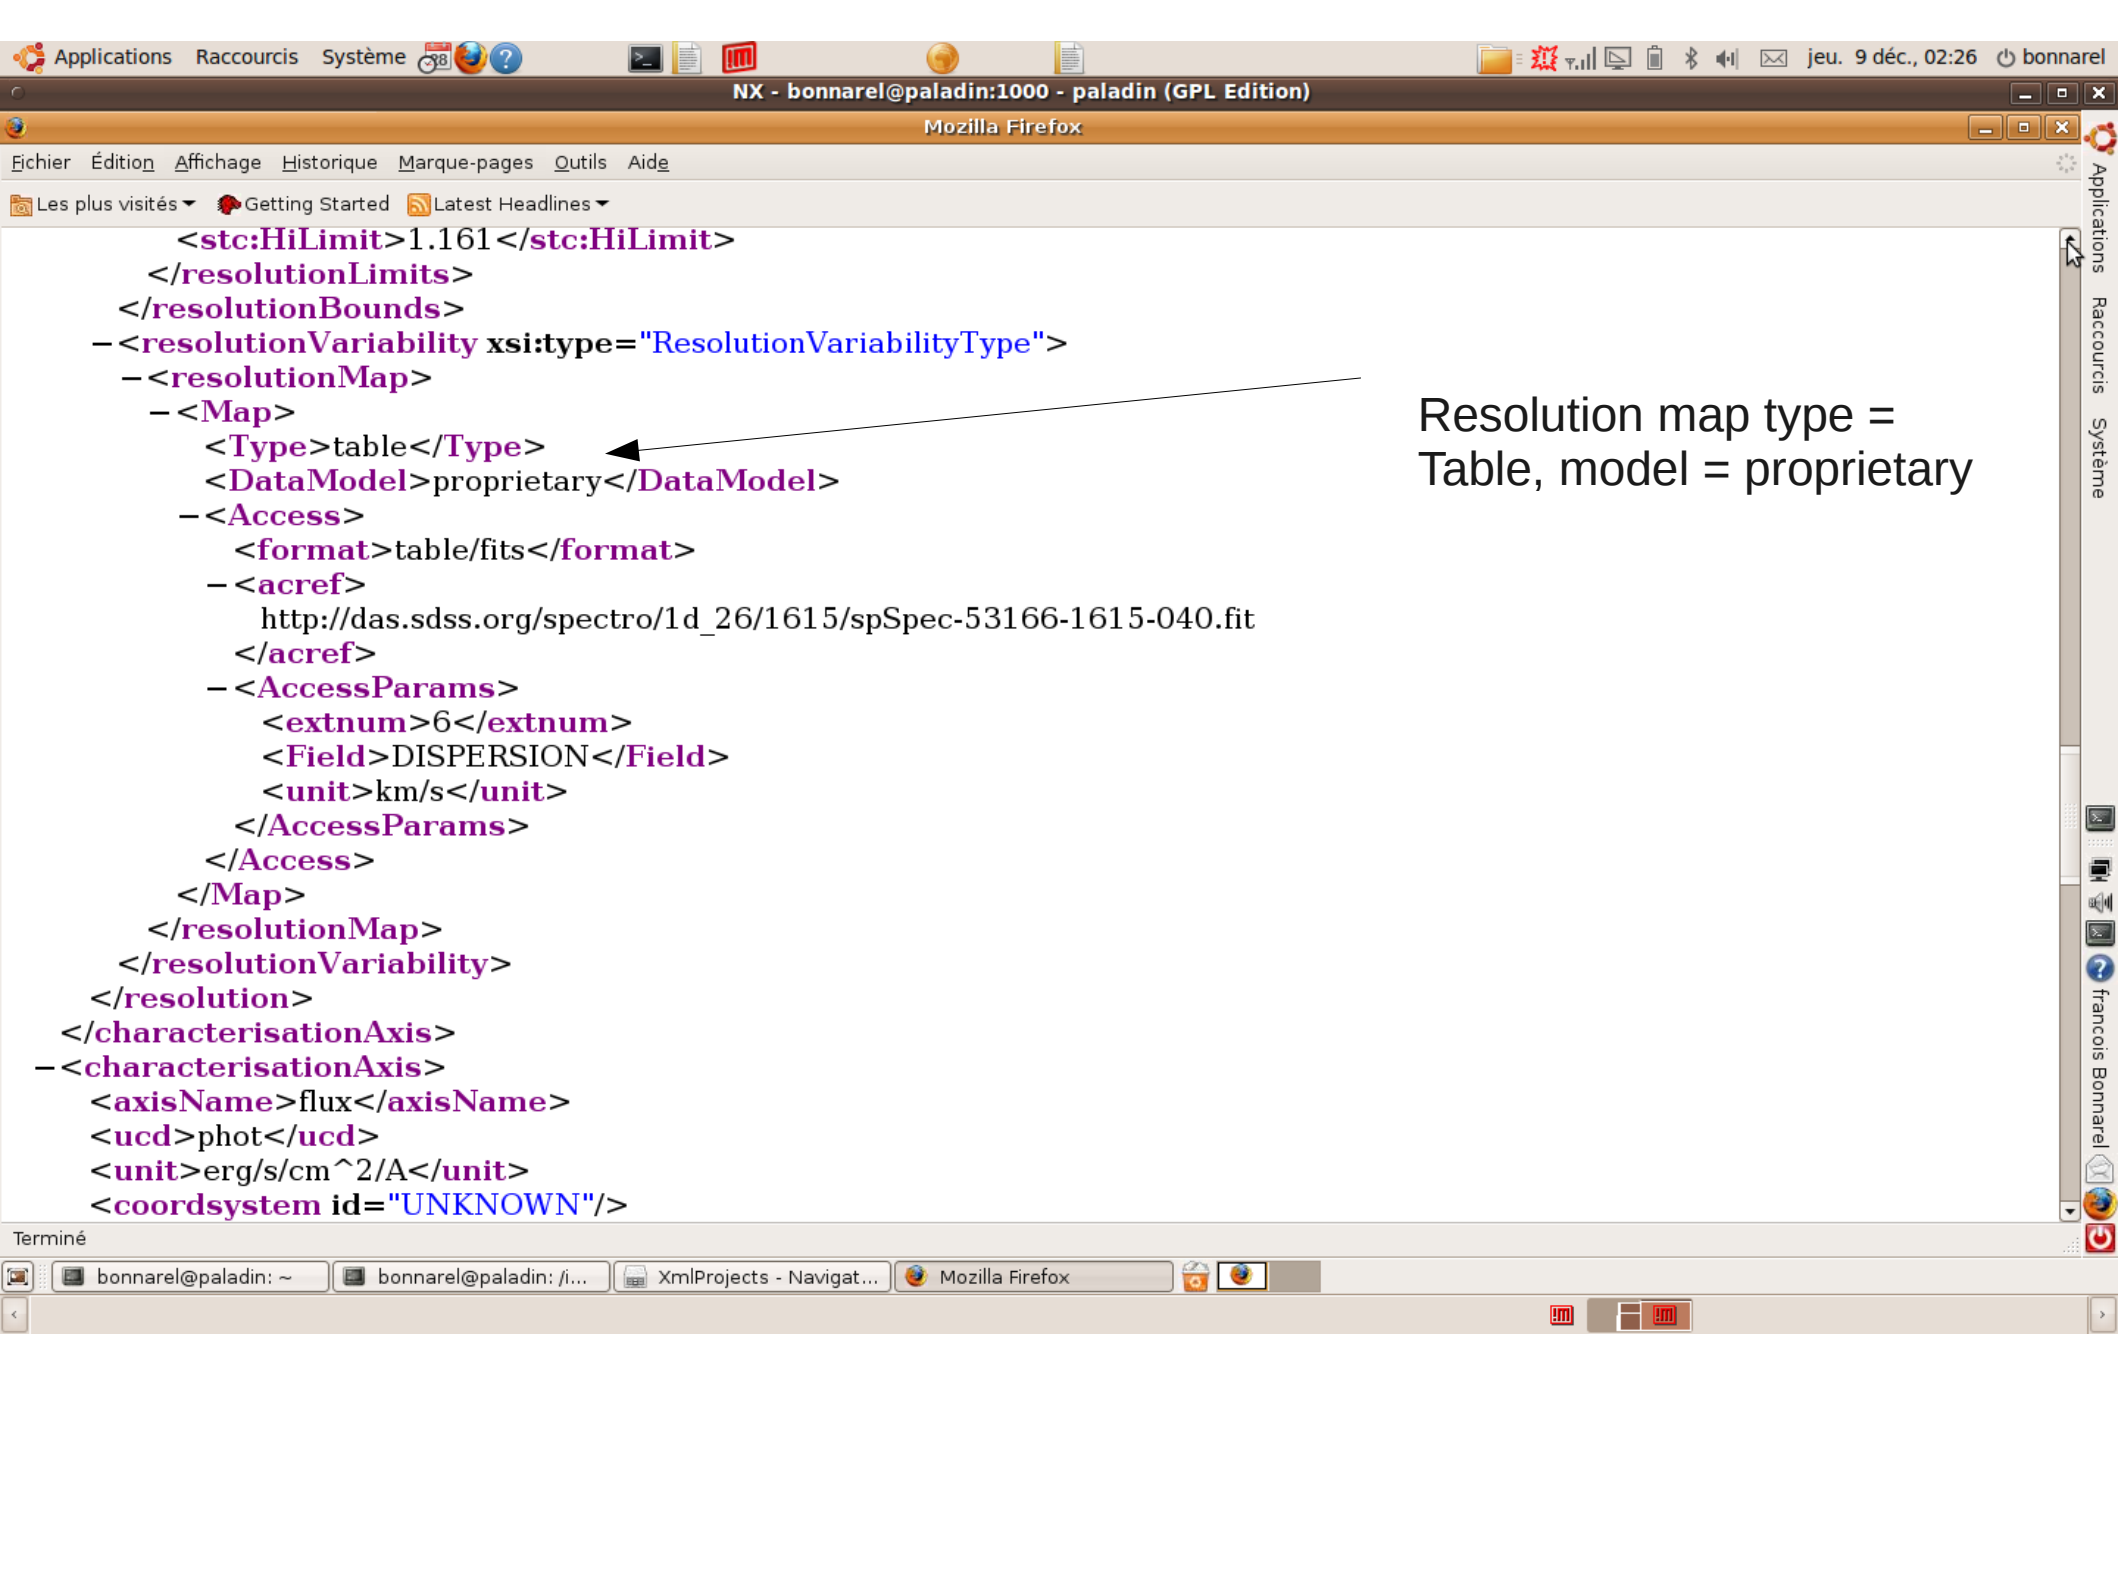

- Polarization axis
 - Enumeration
 - Used in Obstap
- RedShiftAxis (or Radial Velocity Axis)
 - Refval, Bounds, Support made of STC Redshift coordinate and STC RedShift Interval
 - Used in next version of Obstap
- Observable Axis / Flux Axis
 - Ucd : what quantity is observed

Composed dataset

- DataSet made of blocks with specific characterisation (= segments)
 - Global characterisation
 - Segment characterisation
- Usage: CCD mosaics, multi wavelengths, or polarized datasets (spectra, images)
- Within Obstap: global characterisation only...
DataLink ?

full spectrum fitting algorithm

- Presentation and demo by Igor
 - Web interface
 - UWS service
 - with usage of SDSS data
 - SSA and Char2 services
 - Resolution Variations maps retrieved using information conveyed by Char2

Questions

- Should we separate the Acces package (with AccessParams) from Characterisation 2.0?
- Could it be reused by Provenance and DataLink?
- Can we use another format ? (proposal by Norman Gray....)
