

IVOA Data Model

Closing @ESAC, 2014
Jesús Salgado, Omar Laurino

DM activities during interop

- ImageDM/CubesDM
- SpectralDM
- STC2 with VO-DML support
- Char2 DM
- ObsCore DM
- Provenance
- VO-DML
- DM Mapping discussion

DM synchronization (I)

- ImageDM/CubesDM & SpectralDM work in parallel, different phases
- The schedule proposed is:
 - SpectralDM 2.0 in RFC. If no major comments, target recommendation for July
 - ImageDM. Target stable version and RFC for next interop
 - Reference implementations!!!
 - STC2 stable enough
 - Possible impact on SpectralDM

DM synchronization (II)

- Char2DM in the process of update by F. Bonnarel
- Proposal to VO-DLML version so it can be referenced
- STC2 with VO-DML support by A. Rots
- Opportunity to have all these DMs in line and cross-referenced

DM synchronization (III)

- CTA Provenance (M. Louys on behalf of Claudia Lavalley)
- CTA project is being developed as VO-enabled
- DM close to IVOA ones
- TAP service, ObsCoreDM, DataLink possible adaptation...
- Provenance DM (Florian Rothmaier/Kristin Riebe)
- Looking for a general Provenance DM pattern
- Previous Provenance DM efforts should be reviewed and, if possible, adapted to the new pattern

VO-DML and DM mapping

- Session on VO-DML and DM mapping
- Consensus on VO-DML objectives but still discussions on DM mapping VO-DML based
- Due to parallel discussions, possible consensus:
 - Add new attribute `dmlType` in `VOTable`?

VO-DML discussion (afternoon)

- A proposal for a DSL for VO-DML (Paul Harrison)
 - Reference implementation for VO-DML documentation creation (apart from MagicDraw)
- VO-DML specification and Mapping of Complex Data Models (Gerard Lemson)
- Proposal should be evaluated to:
 - Concrete details and possible approaches
 - Evaluate impact
- Next months... quite busy for the DM WG 😊
