

Semantic WG plenary conclusions

Banff Interoperability Meeting , Oct 2014

Mireille Louys, on behalf of Norman Gray

Species elements in UCDs

How to bind semantics to datamodel elements

- **em.line.OIII**, **em.line.C4**, etc ...

ucd = em.line : relative to a line

suffix related to a species

- Two tracks to explore:
 1. Check with archive sites how long is the list of needed elements and for planetary and solar data as well
 2. Expose use cases where more datamodel definition can be used
- Cassis DB / JM Glorian interfacing VAMDC species definitions

UCDs for dataproducts access

meta.ref.url ; preview

- Use a column to describe a link to a preview
- Assess how the semantics field defined in Datalink specification can be used for new ucd words
- A new branch for UCD terms to be added
- A new version for WD UCD₁₊ update by end of 2014
