

## Wide Field Astronomy Unit (WFAU)

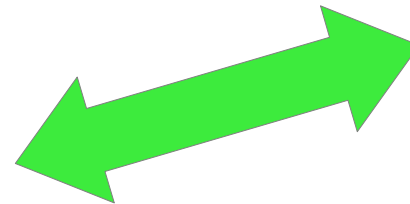

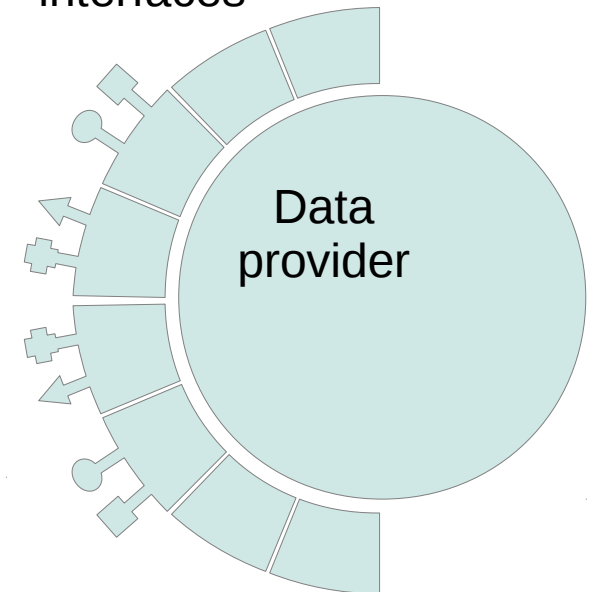

Inner space

Data providers register the services they offer to *external* clients

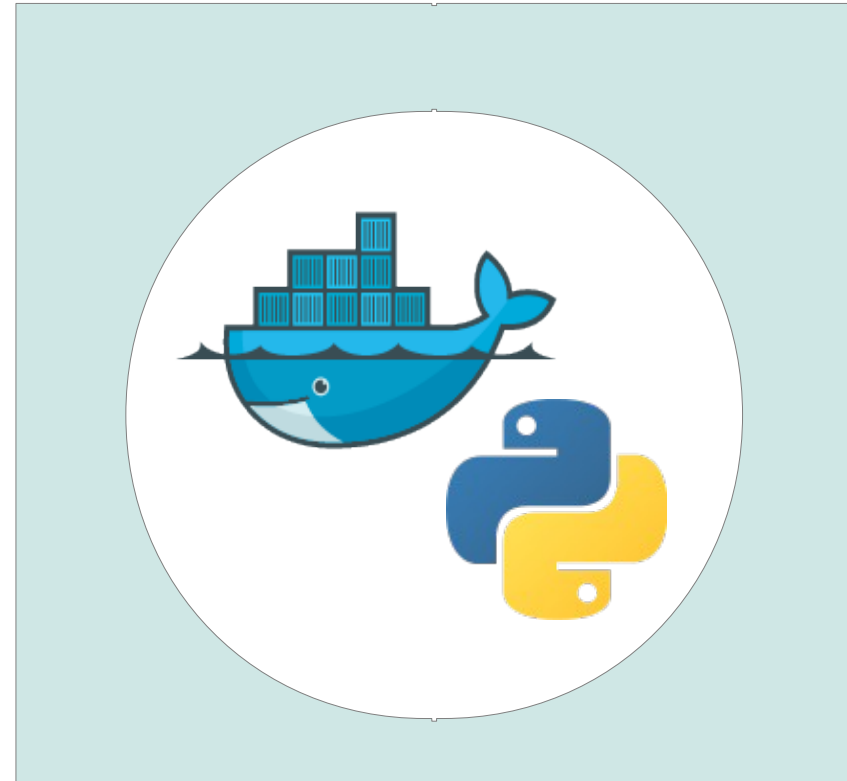

Published interfaces

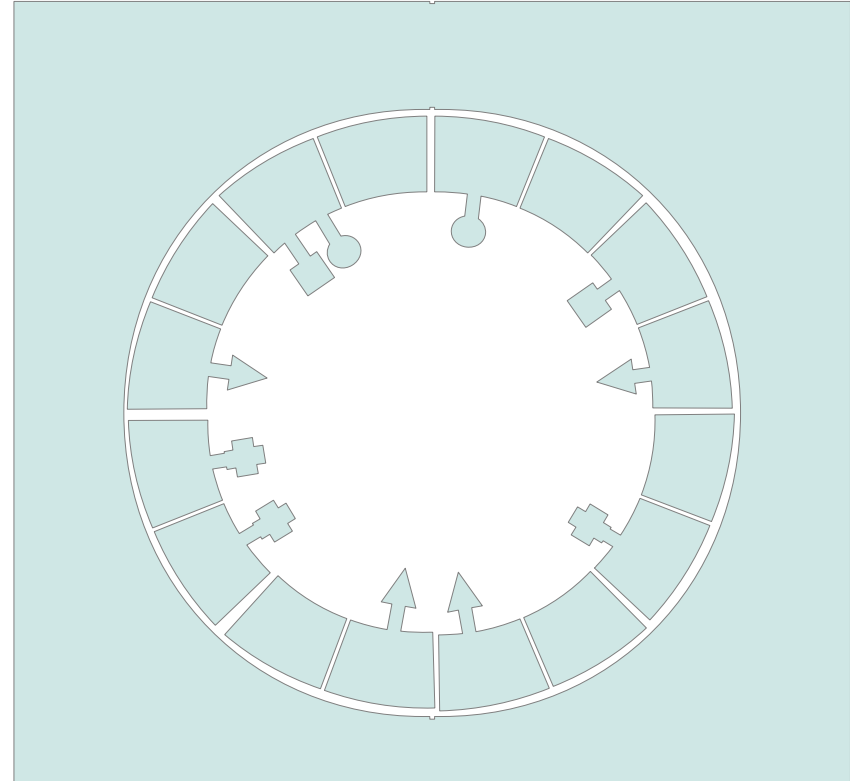

Client uses the Registered endpoints to access the services

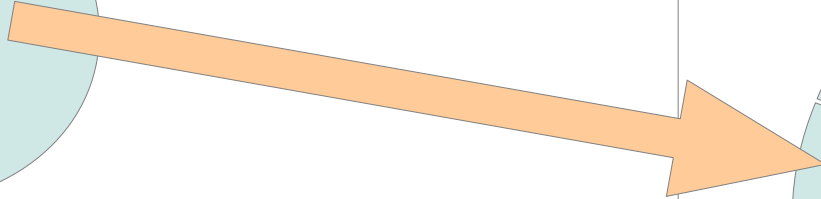

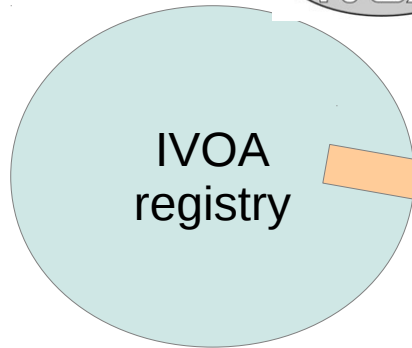

Using Docker to run Python analysis code inside a datacenter

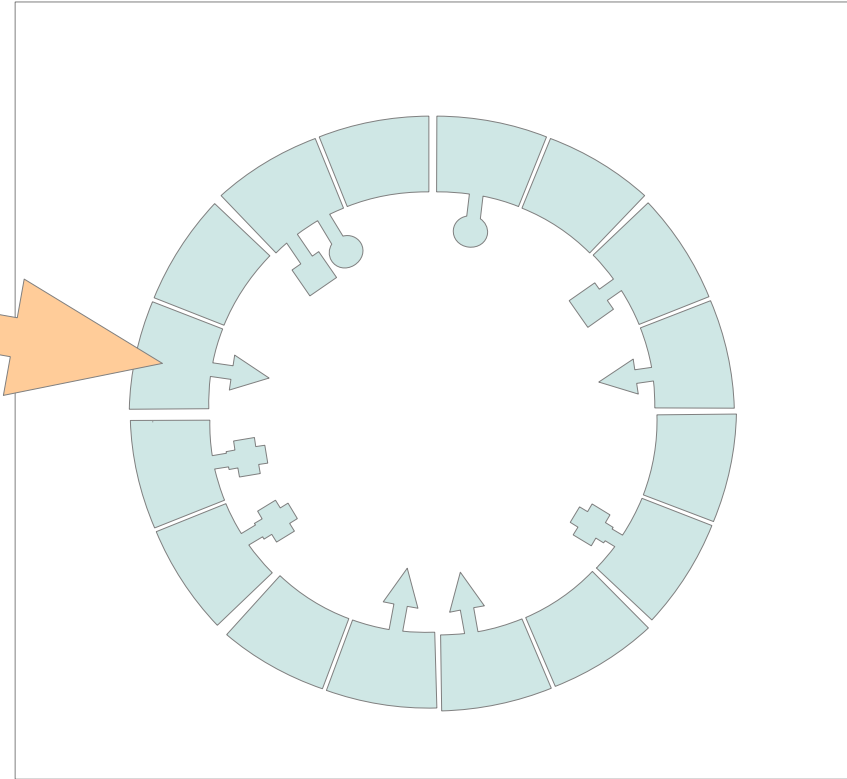

Define standard APIs that  
are available inside  
a datacenter

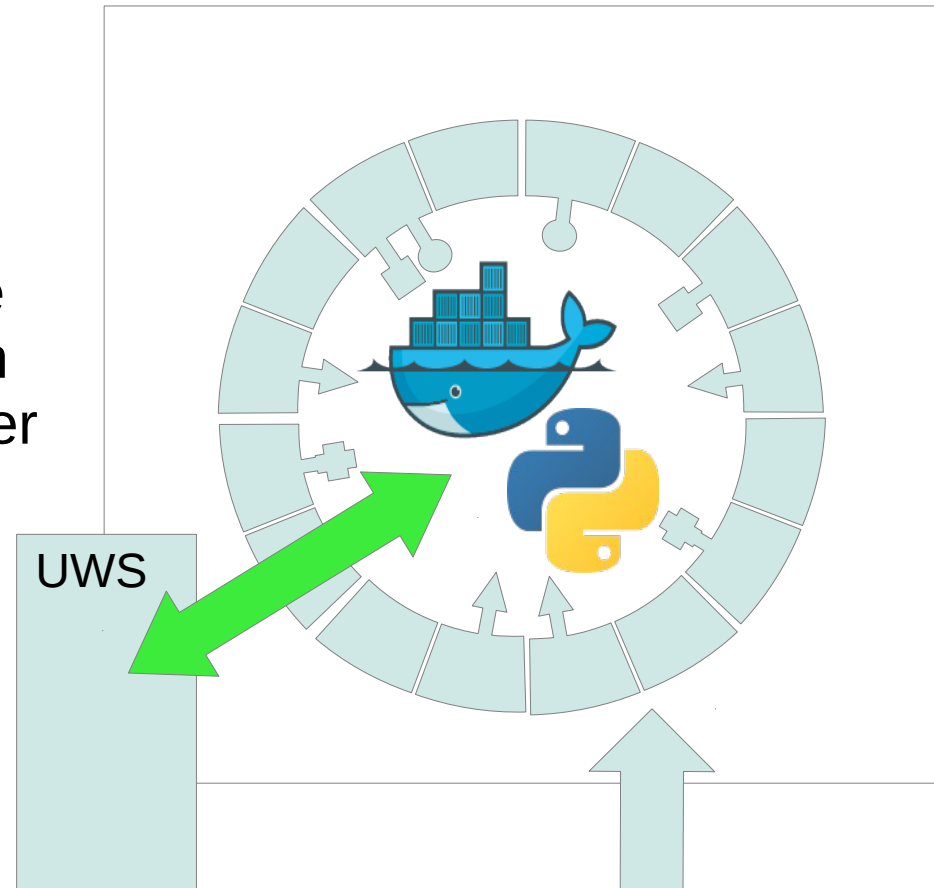

Register a description  
of the APIs that are  
available inside a  
datacenter

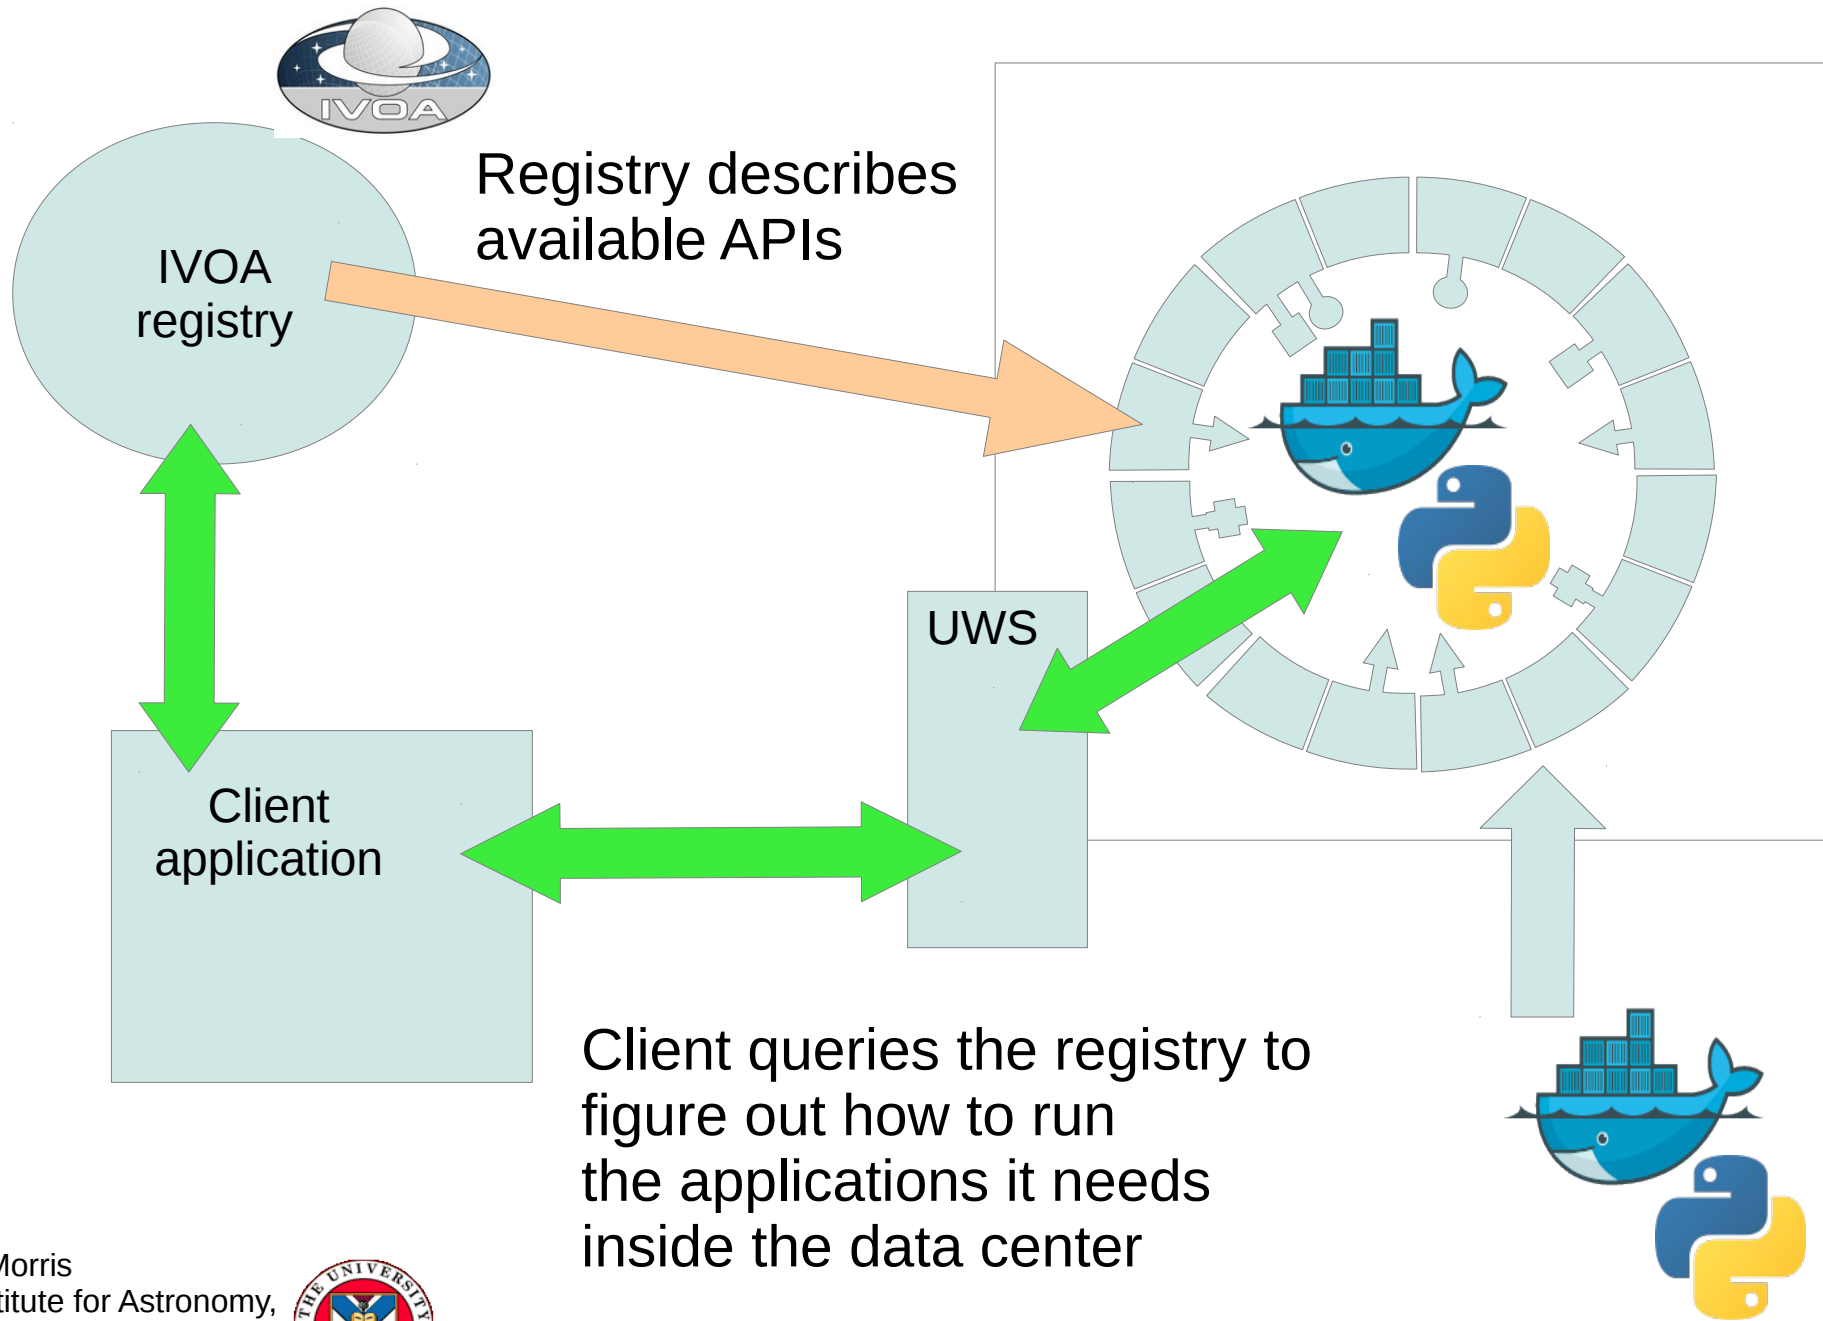

UWS service capable of launching a Python application in a Docker container inside the datacenter

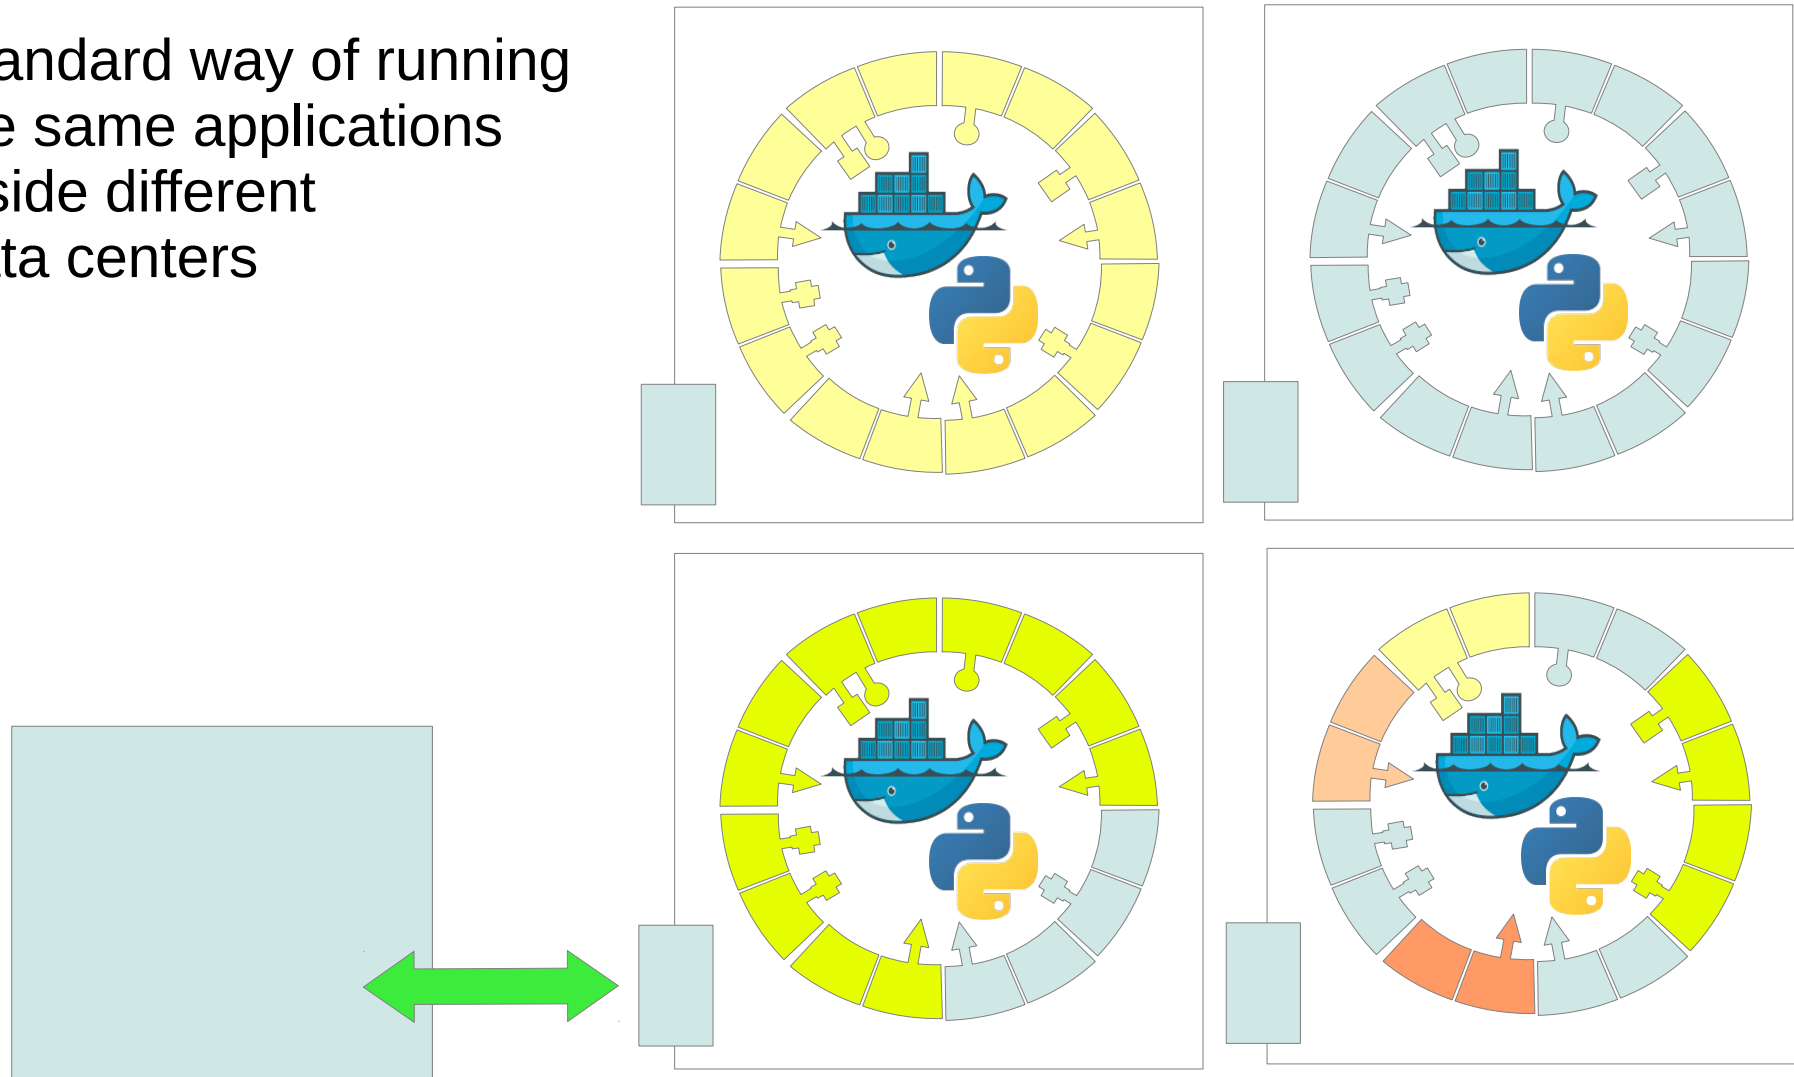

Docker repository of pre-packaged Python applications

Standard way of running  
the same applications  
inside different  
data centers

Docker is just another tool  
in our toolkit ...

Which might enable  
us to do some  
Interesting  
stuff
