

Gaia DR2/3: Serving Time Series, Spectra, SSOs in the VO

J. González-Núñez - ESAC Science Data Center (ESDC)

J. Salgado, A. Mora, J. Bakker, E. Racero, D. Baines, B. Merín, R. Gutiérrez-Sánchez, JC. Segovia, J. Durán, C. Arviset

Issue/Revision: 1.0

Reference: Gaia Archive – VO inside

Status: Issued

ESA UNCLASSIFIED - Releasable to the Public

gaia

European Space Agency

- Homogeneity through common Data Models
 - Mission DMs in line with VO DMs

- Interoperability through Open Protocols
 - VO protocols as core of archive architectures
 - Extend instead of replace

- Goal: Transparent access to Archives and Data providers worldwide

Data Release Scenario

MDB Data Volumes

Main Database Statistics

	Volume today	Estimation 5-year ext.
Size (as of today)	225 TB	~1.4 PB
Number of objects (sources, transits...)	1300 billion	~6000 billion

Total DR1: 1.6 TB

Gaia

• Gaia DR1 catalogue	1.1x10 ⁹	rows
• TGAS	2.0x10 ⁶	rows

External Catalogues

• Hipparcos & Hipparcos new red.	1.2x10 ⁶	rows
• IGSL (Initial Gaia Source List)	1.2x10 ⁹	rows
• 2MASS	4.7x10 ⁸	rows
• Tycho2	2.5x10 ⁶	rows
• UCAC4	1.1x10 ⁸	rows
• Hubble Source Catalogue v1.0	2.9x10 ⁷	rows

Crossmatches

• Crossmatch tables between Hipparcos, 2MASS, Tycho2... and Gaia expressed as neighbourhood and best neighbour, e.g:		
• AllWise-Gaia neighbourhood	3.1x10 ⁸	rows

11.59 Billion rows through TAP+

- DR2 contents (April 2018)
 - Main Catalogue
 - Astrometric 5 parameter solution for “all” stars
 - G magnitude for “all” stars
 - RV for bright sources ($Grvs < 12$)
 - Astrophysical parameters for bright sources ($G < 17$)
 - BP/RP integrated photometry
 - Variables: All sky RR Lyrae stars, Cepheids, LPVs, Short-Time scale, Classification all types, (and EB for CU4, not DR2)
 - Xmatches with “main” catalogues
 - **SSOs**
 - Detections for MPC objects
 - **Epoch Photometry**
 - \sim 100 million sources

Archive content @ DR3

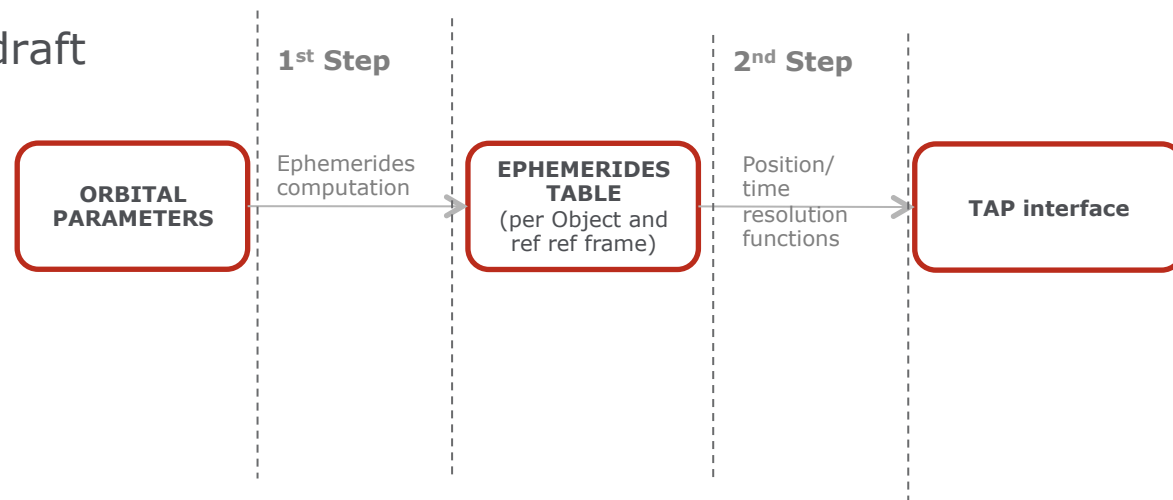

- DR3 contents (TBD ~2020?)
 - Main Catalogue
 - **Spectra**
 - RVS (Averaged, Epoch)
 - BP/RP (Averaged, Epoch) (~ 1E9, ~70 obs)
 - Epoch Photometry (~ **1E9**)
 - SSOs

SSOs

- TAP service adaptation for SSO handling
 - UDFs definition for SSOs
 - Based upon IMCCE Eproc integration performed for ESASKy SSO search service
 - Possible ADQL extension with datatypes and functions to EPN-TAP?

- SSO Data Model
 - EPNCore V2 draft

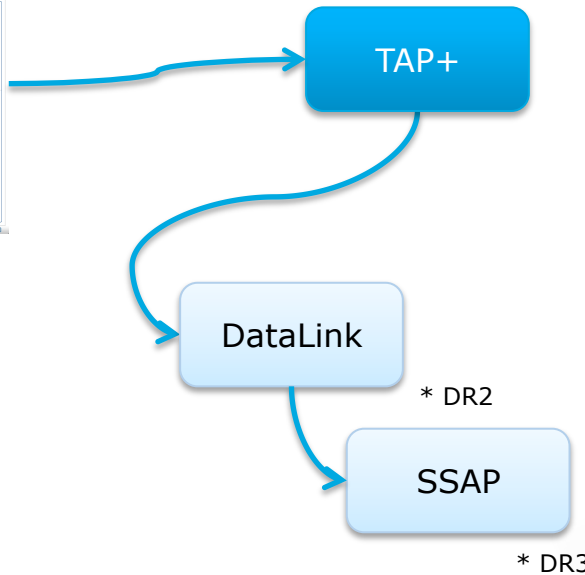

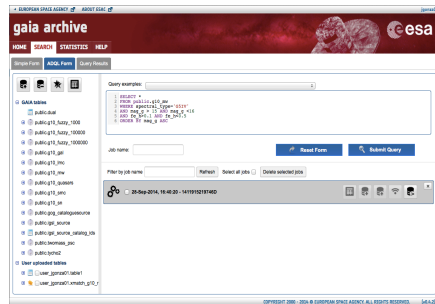

Time Series and Spectra

VO Inside Time Series & Spectra

- DAL side
 - Extension of DataLink through Custom Access Data Service
 - No protocol extension needed
 - Archive data distribution has Mission specific features
 - DataLink recognition
 - On the fly data serialization to requested formats
 - SSAP, Obscore TS vs SVO TS-SSAP?

DataLink/SSAP int. with TAP+

VO Inside Time Series & Spectra

- DAL side
 - Extension of DataLink through Custom Access Data Service
 - No protocol extension needed
 - Archive data distribution has Mission specific features
 - DataLink recognition
 - On the fly data serialization to requested formats
 - SSAP, Obscore TS vs SVO TS-SSAP?
- DM side
 - OK for spectra, pending Time Series
 - DR2 ~April 2018
 - Need to base in and extend current WIP (Nadvornik TS draft)

VO Inside Time Series & Spectra

- DAL side
 - Extension of DataLink through Custom Access Data Service
 - No protocol extension needed
 - Archive data distribution has Mission specific features
 - DataLink recognition
 - On the fly data serialization to requested formats
 - SSAP, Obscore TS vs SVO TS-SSAP?
- DM side
 - OK for spectra, pending Time Series
 - DR2 ~April 2018
 - Need to base in and extend current WIP (Nadvornik TS draft)
- Applications
 - Spectra (VOSpec, SPLAT-VO)
 - Time Series (A. Nebot talk on SCI session)

DR2 Contents

Thanks!
