

# Automatic builds of the ADQL Standard

James Dempsey | 7 May 2020

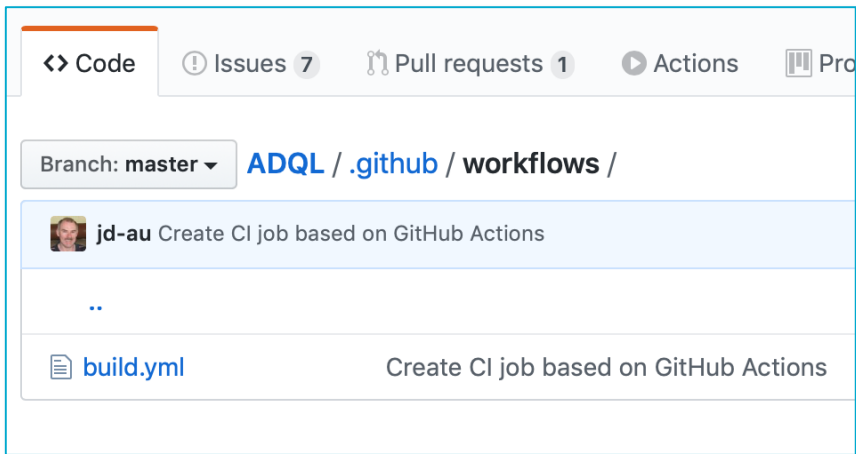

# Why do automatic builds?

- Check every pull request automatically
- Has the change broken the document?
- What does the result of the change look like?
  
- Benefits:
  - Quick feedback for the authors
  - Helps reviewers see what has changed
  - Identify bugs (tex is code) quickly!

# How we set it up

- GitHub Actions
  - <https://github.com/ivoa-std/ADQL/blob/master/.github/workflows/build.yml>
- Build is part of the repository
- Run as part of the GitHub ecosystem
- Another good alternative is Travis

# What the build does

- Steps

1. Checkout the branch
2. Prepare a build environment
3. Make the document
4. Check that the pdf has been built
5. Publish the PDF with the PR

```
1 name: CI build of the ADQL standard
2
3 on:
4   pull_request:
5     types: [opened, synchronize, reopened]
6
7 jobs:
8   build:
9
10    runs-on: ubuntu-latest
11
12    steps:
13      - uses: actions/checkout@v1
14        with:
15          submodules: true
16      - name: Setup dependencies
17        run: |
18          sudo apt update
19          sudo apt install texlive-latex-base texlive-latex-recommended t
20
21      - name: Build the document
22        run: make biblio forcetex
23
24      - name: Check the output
25        run: |
26          test -f ADQL.pdf
27          test -f ADQL.bbl
28
29      - uses: actions/upload-artifact@v1
30        with:
31          name: PDF Preview
32          path: ADQL.pdf
```

# Where to find the document

The screenshot shows a GitHub pull request interface. At the top left, the repository is identified as 'ivoa-std / ADQL'. On the right, there are buttons for 'Unwatch' (9), 'Star' (3), and 'Fork' (4). Below these are navigation tabs: 'Code', 'Issues' (7), 'Pull requests' (1), 'Actions', 'Projects' (1), 'Wiki', 'Security' (0), 'Insights', and 'Settings'. The main title of the pull request is 'Add a note about the the UDF catalogue #26', with an 'Edit' button on the right. Below the title, a green 'Open' button is followed by the text 'gmantele wants to merge 1 commit into ivoa-std:master from gmantele:issue-16-udf-catalogue'. Further down, there are tabs for 'Conversation' (8), 'Commits' (1), 'Checks' (1), and 'Files changed' (2), along with a diff indicator showing '+8 -0' and a green progress bar. The pull request description starts with a green checkmark icon and the text 'Add a recommendation to use UDFs listed in the PEN about a UDF catal...'. On the right side of this description, the 'Artifacts' section is highlighted with a purple circle, showing 'Artifacts 1'. At the bottom left, a 'CI build of the ADQL standard' is shown as failed, with the message 'on: pull\_request'.

# How does it affect the pull request

| <input type="checkbox"/> |  | 1 Open   | <input checked="" type="checkbox"/> | 19 Closed | Author | Label              | F   |
|--------------------------|--|--|-------------------------------------|-----------|--------|--------------------|-----|
