IVOA VOQL

Closing Plenary Session
Strasbourg Interop meeting
May 25-29 2009

Two presentations

- **Jeff Lusted: on a possible future VOQL**
  - Set-based ;language
  - Block structure
  - EXTRNS, MACRO, MAP, …

- **Andy Lawrence: on whether ADQL direct queries are needed**
  - Don't expect his presentation in the wiki ;-)
  - A rebate of Dave's introductory talk: astronomers do want to have access to the query language
  - Need of 80-20 modeling concept

Not clear roadmap as of now

- Will define plan of action during these months

- Proposals for evolution will be identified taking into account experience gained with TAP implementations

- Hope to have a clear follow-up for the group by next interop meeting (with new chair)
