# VESPA workshops

## Organisation

Open call + organisation of (in-person) workshop

Application: science case + status of data and database

Ideally 4 teams selected + internal contributions (from VESPA and other Europlanet WP)

Requires some effort to get people involved

Day 1: general presentation of VO / VESPA / service projects

Day 2: starting service design + install DaCHS on VM / Docker

Day 3: implementation

Day 4: review, tests

Day 5 (optional): further subjects

<https://voparis-wiki.obspm.fr/display/VES/2021-vespa-implementation-workshop>

Invite Markus! => opportunity to update / improve existing services

Post-workshop activity is important

# VESPA workshops

## Evaluation

- Demanding! (for organizers)  
Especially to identify projects and to get people involved  
(very few spontaneous applications)  
=> Need to couple this with presentations / discussions in conferences + mailing list
- Extremely rewarding  
4-days exclusive activity  
Also helps building connections between people and teams / fields  
Both science and technique oriented — you do learn things  
In Europlanet 2024, this is the only travelling budget we got => need to take advantage of this  
Produces tutorials and material that can be reused:  
<https://voparis-wiki.obspm.fr/display/VES/2021-vespa-implementation-workshop>
- Finalization?  
Almost never during the workshop  
Need to keep pushing long after the workshop  
Some projects prove nearly impossible to finalize, but clearly identifies data handling issues  
Need to produce and publish at least a report  
May work in the long run, after a false start

# PADC seminars

## **Request from a Tunisian astro group to have a series of on-line VO seminars (for users)**

We (Z. Meliani and PADC direction) will set up a programme

Will rely on / use existing tutorials from IVOA or ESCAPE

Videos will be recorded for future occasions

Will probably be in French, though ;(

This year IVOA session for new-comers provides a good basis, perhaps a bit too detailed
