

datalink for theory

david.languignon@obspm.fr

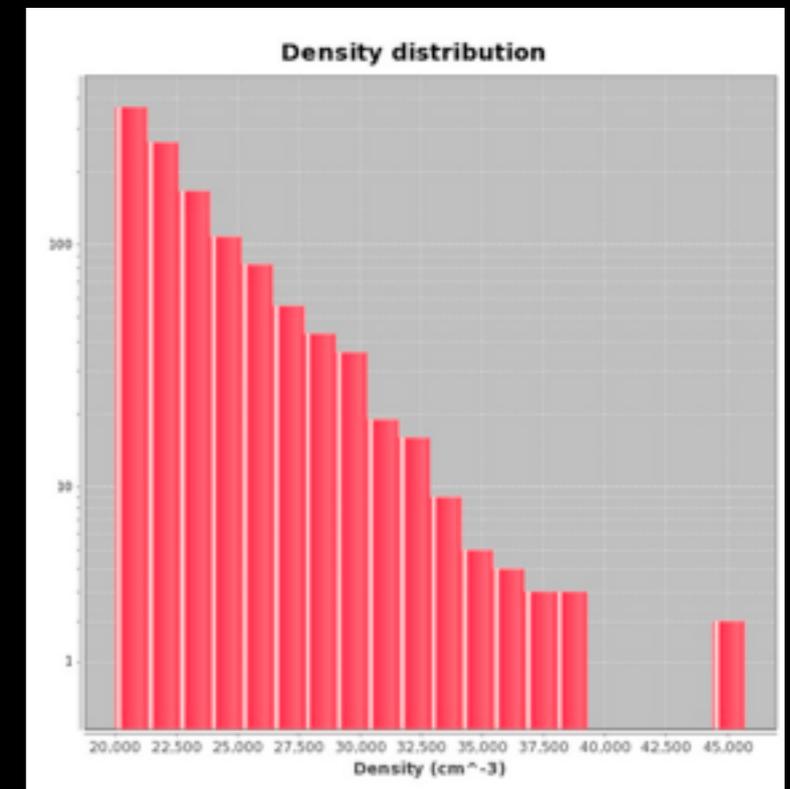

use case

- preview

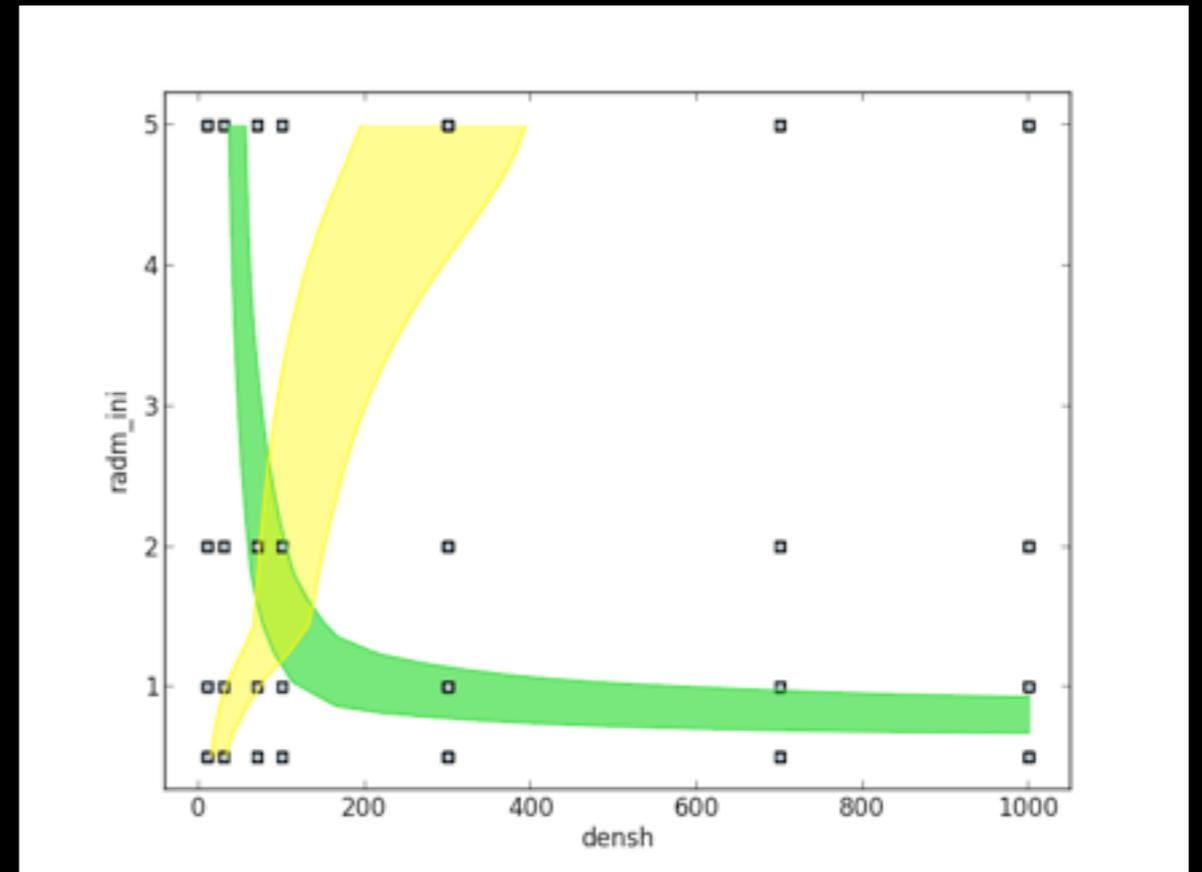

- image (ex: halos in universe cube)

- data distribution (help cutout)

use case

- external service links
- cutout service
- specific, ex: iso-contours for model fitting

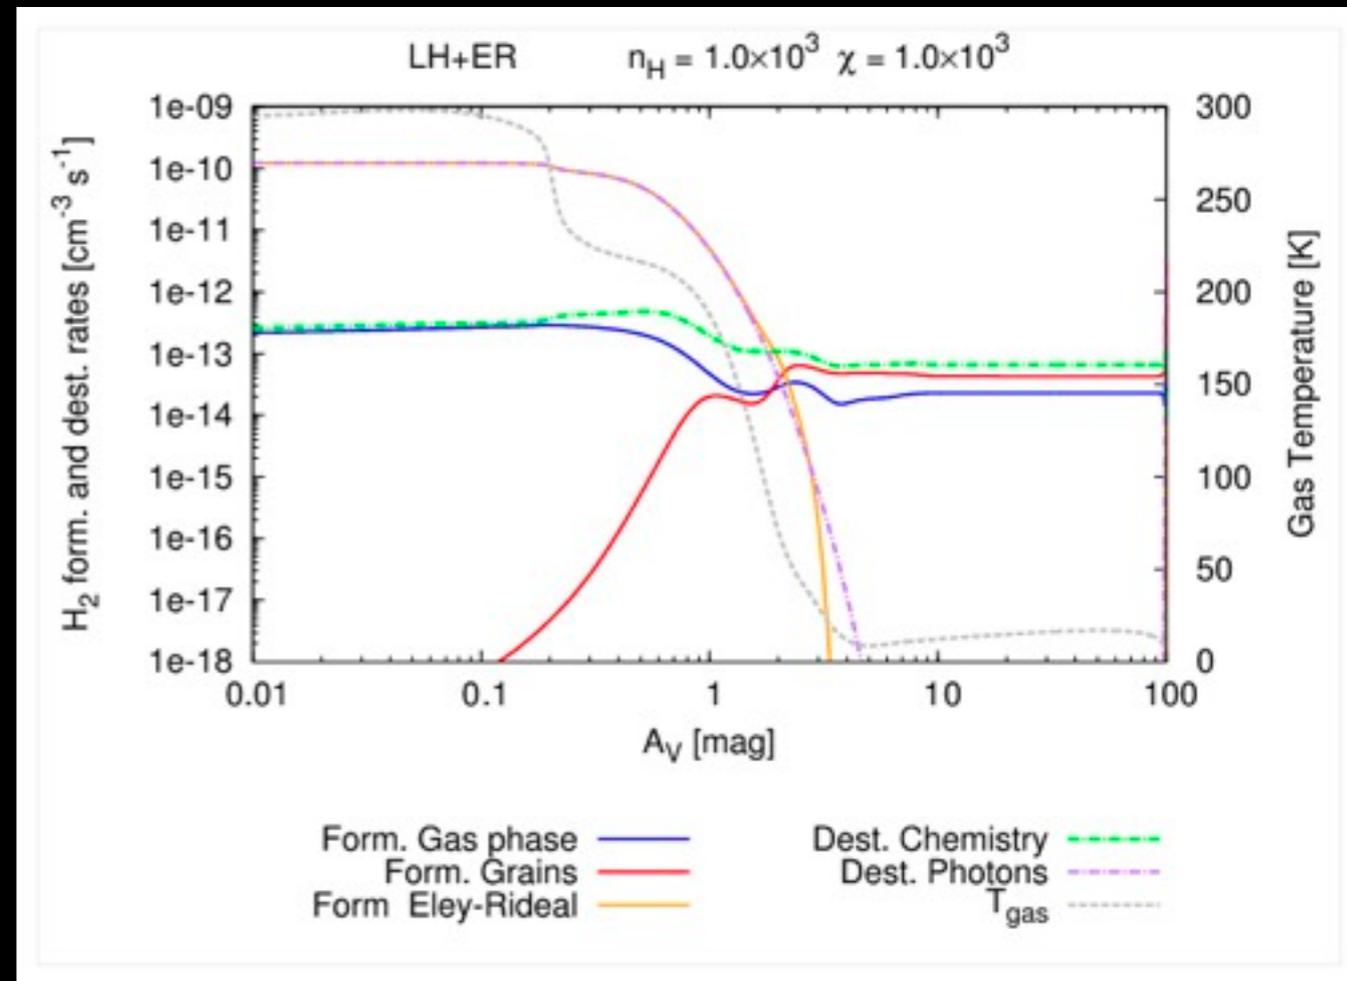

use case

- generic data repository

```

URI over dataset_id

composable services

cutout

- cutout interface (java like)
 - extend cutout to any set (ex metadata)
- cutout contract
 - composable function !
 - (cutout set) \rightarrow set

URI for any (data)set

- (cutout dataset) -> dataset
- (cutout (cutout dataset)) -> dataset
-

- (datalink dataset)
- (datalink (cutout dataset))

URI over dataset_id

- predefined dataset (dataset_id)
- but also **dynamically generated datasets** (ex: from previous cutout).

URI=[http://my.server/datalink/cutout?
uri=experiments&cutout='mass<10e3'](http://my.server/datalink/cutout?uri=experiments&cutout='mass<10e3')

case study, model fitting

ntot(h) < 7.4415e20 and ntot(co) > 0.4e14 and ntot(oh) > 1.01e15

datalink

accessURL

summary

- Use case
 - **preview** (pictures)
 - data repository (raw data)
 - external services (**postprocessing**)
- Specific needs
 - mime-type (hdf5, jpeg etc...)
 - content-length (not always known/calculated)

summary

- we need composable services
 - cutout in particular
- would be nice
 - generalized cutout interface
