

SLAP 1.1

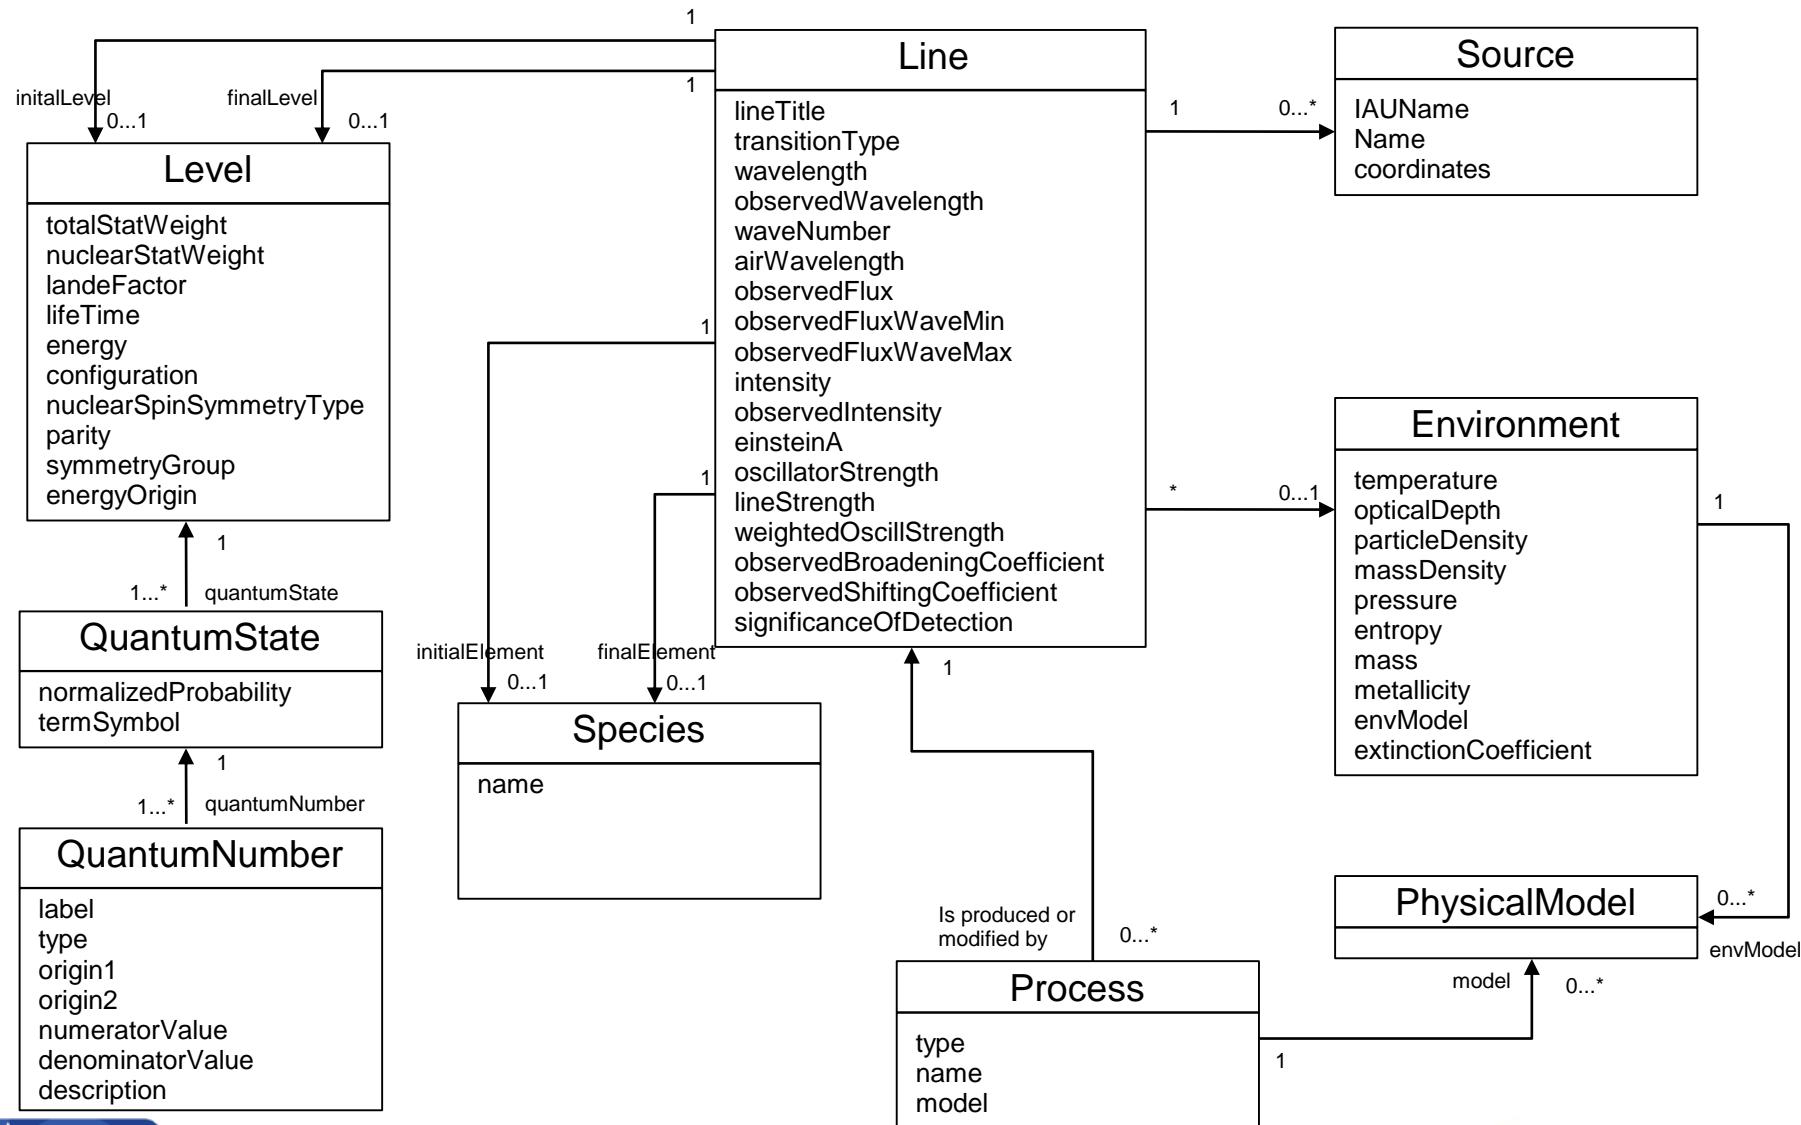

N.Moreau
(LERMA / VAMDC Consortium)

Shanghai Interop meeting 2017

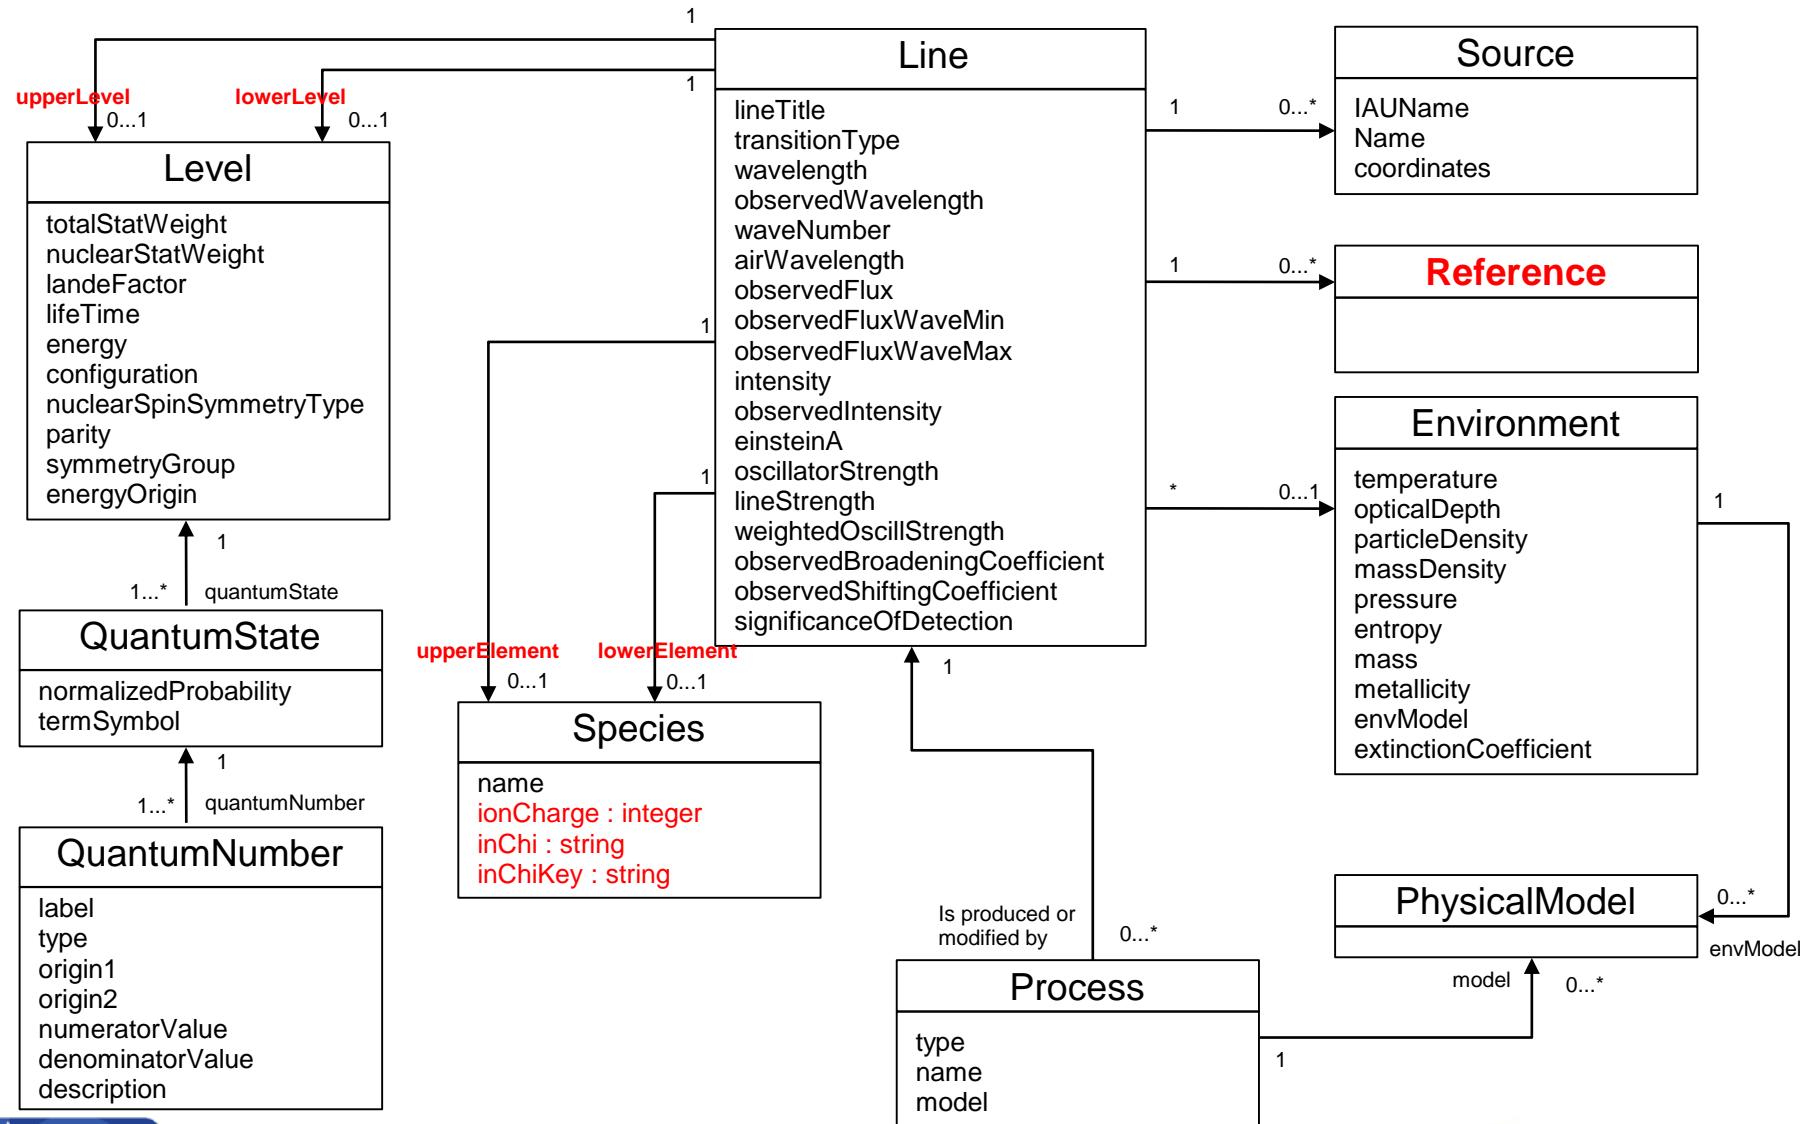

1. New Data Model
2. Search parameters
3. Output fields
4. QuerySpecies operation

1. New Data Model
2. Search parameters
3. Output fields
4. QuerySpecies operation

Current data model

New data model

Changes in the DM

- A Line has an upper and a lower level
- A line has an upper and a lower element
- All atomic and molecular databases uses this notation rather than initial/final
- Species has 3 new attributes :
 - IonCharge
 - InChi : species description in InChi standard notation
 - InChiKey : hash of InChi
- A Reference is either an URL or a bibtex description

1. New Data Model
2. Search parameters
3. Output fields
4. QuerySpecies operation

Input parameters

- Add ION_CHARGE query parameter
- Charge interval
- Examples of requests with new parameter :
 - Neutral CO :
http://someservice/slap.jsp?REQUEST=queryData&CHEMICAL_ELEMENT=CO&ION_CHARGE=0
 - CO+ :
[http://someservice/slap.jsp?](http://someservice/slap.jsp?REQUEST=queryData&CHEMICAL_ELEMENT=CO&ION_CHARGE=1)
REQUEST=queryData&CHEMICAL_ELEMENT=CO&ION_CHARGE=1
 - Neutral CO and CO+ :
http://someservice/slap.jsp?REQUEST=queryData&CHEMICAL_ELEMENT=CO&ION_CHARGE=0/1

1. New Data Model
2. Search parameters
3. Output fields
4. QuerySpecies operation

RESOURCE element

- The RESOURCE element **SHOULD** contain an INFO with name="REQUEST_COMPLETED_TIMESTAMP". Its value attribute contains the UNIX timestamp in seconds when the file was created by the service.
- The RESOURCE element **SHOULD** contain an INFO with name="SERVICE_VERSION".
 - Its value attribute contains the version of the service
 - The format of this value is managed by the data provider.
 - It must be updated each time the database content evolves.
- The RESOURCE element **SHOULD** contain an INFO with name="SERVICE_NAME". Its value attribute contains the name of the service that was queried. The format of this value is managed by the data provider.
- The RESOURCE element **SHOULD** contain an INFO with name="REQUEST_DESCRIPTION". Its value attribute contains a text description of the request that has been performed to obtain the data.

New optional fields in TABLE element

- New optional fields corresponds to the new attributes of the Species class in the data model
- New optional fields have utypes :
 - ssldm:Line.lowerElement.inChiKey
 - ssldm:Line.upperElement.inChiKey
 - ssldm:LinelowerElement.inChi
 - ssldm:Line.upperElement.inChi
 - ssldm:Line.lowerElement.ionCharge
 - ssldm:Line.upperElement.ionCharge

Renamed optional fields in TABLE element

- All fields that used initial/final level of initial/final element now uses upper/lower notation instead
- They correspond to the renamed relations in the DM
- List for lowerElement and lowerLevel :
 - ssldm:Line.lowerElement.name
 - ssldm:Line.lowerLevel.name
 - ssldm:Line.lowerLevel.energy.value
 - ssldm:Line.lowerLevel.configuration
 - ssldm:Line.lowerLevel.quantumState
 - ssldm:Line.lowerLevel.quantumState.quantumNumber.label
 - ssldm:Line.lowerLevel.quantumState.quantumNumber.numeratorValue

References of a Line in TABLE element

- If a link to the reference is available :
 - ucd="meta.bib;meta.ref.url"
- If there is no link available :
 - ucd="meta.bib" and available informations related to this line are written in bibtex

Values of IDENTIFICATION_STATUS corrected

- Possible values of **ssldm:Line.identificationStatus** in the document where not the same in :
 - chapter 6.1 : unidentified, identified and uncorrected
 - the appendix : UNIDENTIFIED, IDENTIFICATION_UNCERTAIN, IDENTIFICATION_PROVISIONAL, IDENTIFIED
- Values of appendix are the correct ones and are now used in chapter 6.1

1. New Data Model
2. Search parameters
3. Output fields
4. QuerySpecies operation

- Client applications needs to know what species are available to :
 - Suggest species existing in a service to the user
 - Suggest services for a given species
- VAMDC has a specific request "select species"
- Adding a new QuerySpecies operation in addition to QueryData
- It supports the FORMAT=METADATA parameter

```
