WD-DALI-1.1

- updates since May 2016
    - polygon: counter-clockwise
    - timestamp: allow timezone indicator Z when value is a *civil time*
    - region xtype dropped
- done

WD-TAP-1.1

- updates since May Interop
  - removed mapping table; refer to DALI xtypes
  - strongly recommend that /availability and /capabilities allow anonymous access
    - require?
  - relax restrictions on (column) names
    - clarify that services must support quoted identifiers

WD-TAP-1.1

- proposal: require that services support PHASE=RUN in the job creation POST
  - immediate PENDING to QUEUED
- UWS mentions it
  - not applicable to all possible services, so in scope for TAP?
- do we require that services sensibly allow the normal 2-post create + execute?

WD-TAP-1.1

- proposal: add xtype column to tap_schema.columns
  - put VOTable type in datatype
  - can use VOTable types in VOSI-tables output
    - could deprecate TAPType in VODataService
  - simple & direct tap_schema <-> VOTable mapping
  - what about *ADQL types*? e.g. CLOB

  note: we already added a column to this table for TAP-1.1

WD-TAP-1.1

- proposal: add column value statistics to the tap_schema
  - min/max, fill
  - median, quartiles
  - histograms
- CADC service has aggregate tables for *enumerated* values
  - pre-computed GROUP BY
